

# Becoming a Smart Sustainable Nation

SDG Societal Transition  
Network of Excellence

## By Nurturing Learning Societies

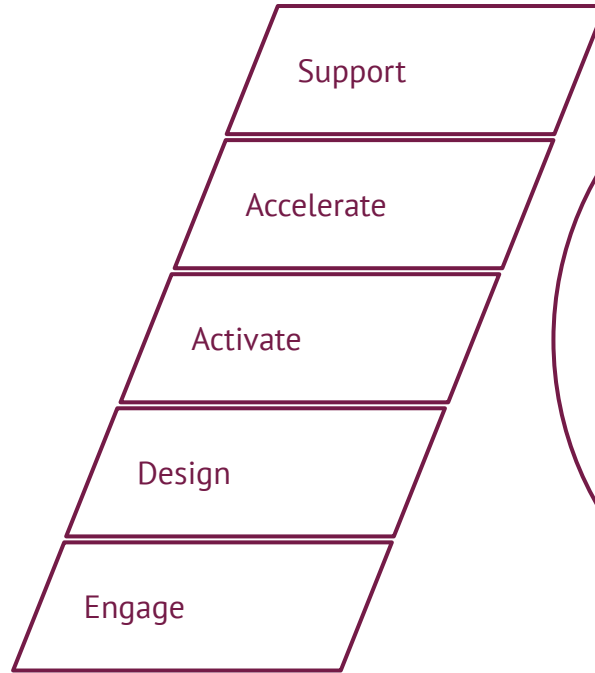

# What to do

Localise the work on Smart Sustainable Development at the city and community level

Demonstrate how interesting solutions can be integrated to accommodate local needs and mobilise available resources

Accelerate impact by linking local action to regional, national and international partners for knowledge sharing and funding

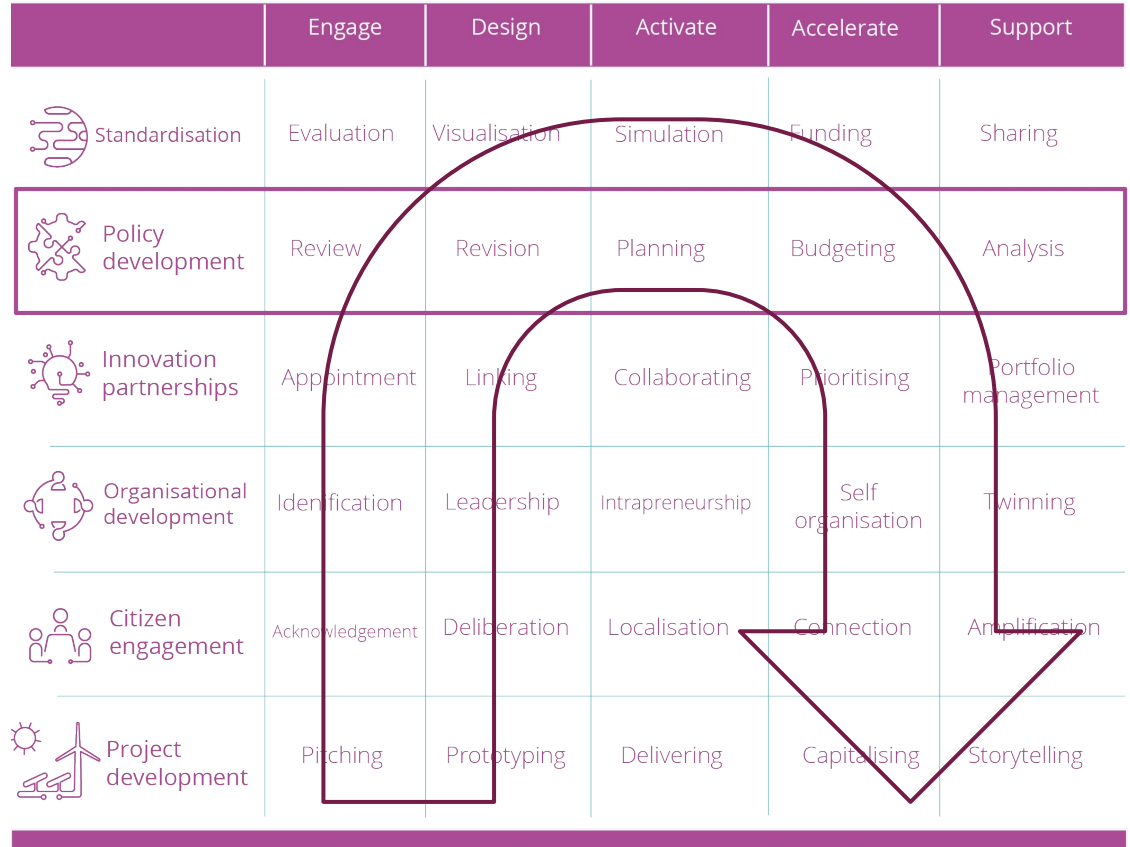

# Listen, link and learn

Cities as playgrounds and platforms for open innovation where local leadership is trained and incentivised to *listen* in for and acknowledge interesting initiatives wherever they originate

Capacity to *link* up to promising communities and initiatives across space and time to develop shared meaning and purpose, and mutually invest in promising solutions

*Learning* by doing and assuring that claims to knowledge are legitimate only in so far as positive impact is demonstrated

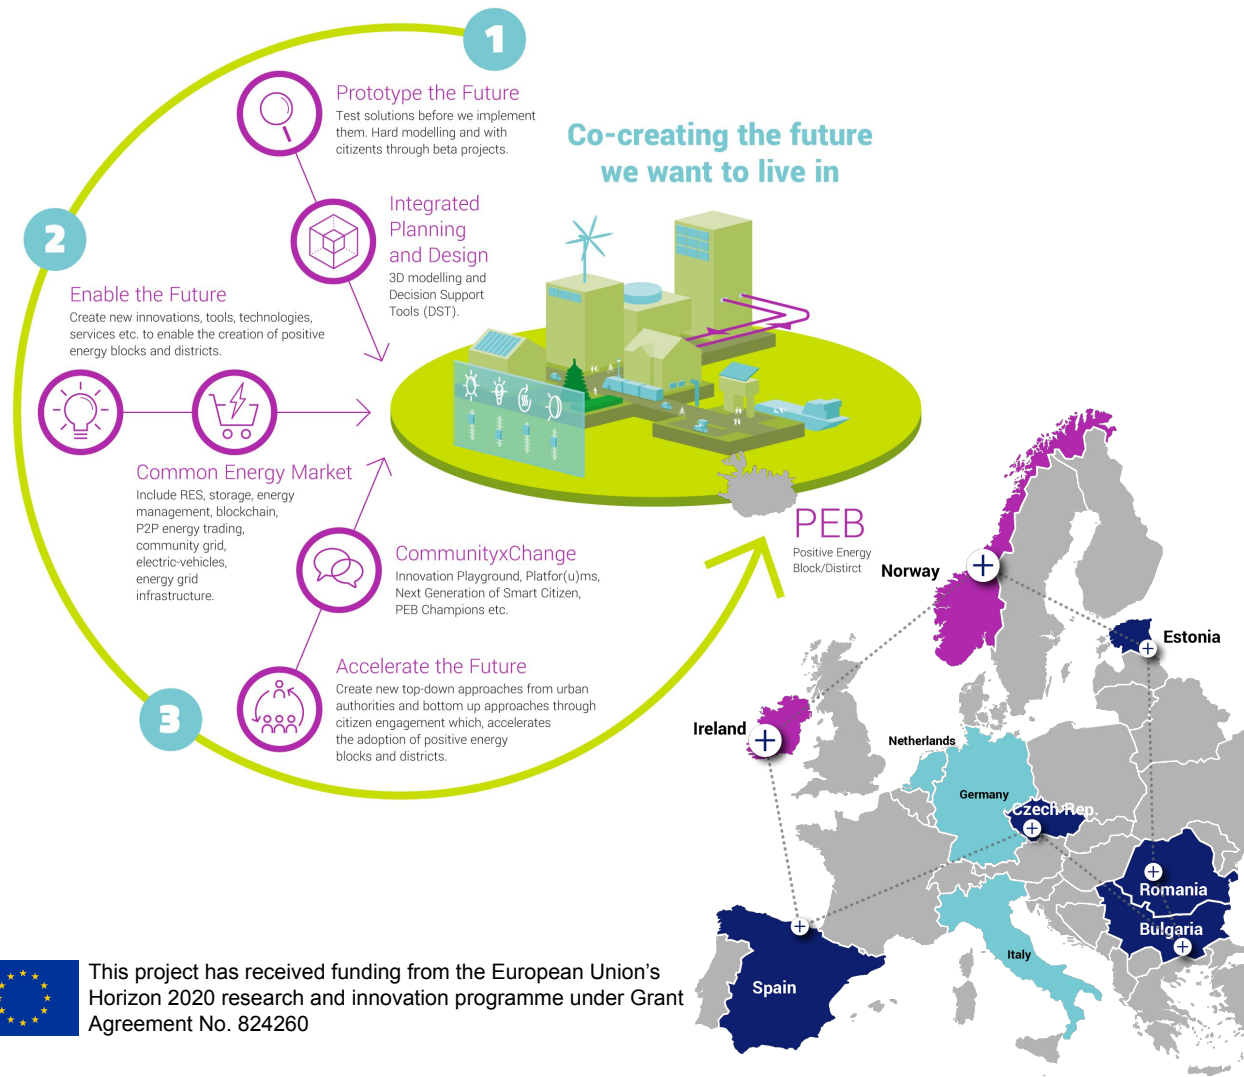

# In practice

Seven European cities come together to demonstrate how to become Energy Positive by 2030

In order to align policy, action and impact they will use the U4SSC KPIs as a baseline and structure their roadmaps using the generic SDG City Transition Framework

The project is funded by the EU H2020 Program and the framework development is headed by Light House City Trondheim

This project has received funding from the European Union's Horizon 2020 research and innovation programme under Grant Agreement No. 824260

# Thank you
