

**ITU Workshop on QoS and QoE of Multimedia  
Applications and Services**

**Haarlem, The Netherlands 9-11 May 2016**

**Framework for Monitoring the QoS of IP  
network services  
(Draft recommendation Y.FMIPQoS)**

**Yvonne Umutoni  
Chair of the ITU-T SG12 QSDG**

# BACKGROUND

- Need of ITU-T recommendation about monitoring the QoS of internet: this was raised in Mozambique workshop and the 32nd meeting of QSDG
- First proposed naming: Framework for monitoring the QoS of broadband internet access
- Last SG12 meeting adopted:
  - naming of the new work item as: Y.FMIPQoS (Framework for monitoring the QoS of IP network services)
  - scope of work in TD 853 Rev1

# SCOPE OF WORK

- Draft Recommendation:
  - highlights the need of testing the QoS of IP Network service offered by ISPs, from the regulatory point of view.
  - addresses quality of service evaluation scenarios, sampling methodology and testing tools for Regulators.
  - gives guidance to Regulators about minimum QoS parameters for evaluating the quality of IP Network services.

# NEXT STEP

- QSDG Members and other participants are requested to contribute to the new draft recommendation Y.FMIPQoS
- Editor:
