

Aspects Of Network Performance Orchestration

Dr. Rami Alnatsheh

TU Workshop on Performance, QoS and QoE for Multimedia Services

Dakar, Senegal, 19-20 March 2018

Who we are

InfoVista provides cost-effective network performance orchestration solutions that help our customers provide top-quality user experience while increasing the capital efficiency of their networks.

Best in class solutions for all networks

6 times Gartner Visionary

Enterprises

automatically guarantee business-critical application performance over the secured hybrid-infrastructure, while reducing telecom costs.

#1 in Business Services

Communications Service Providers

maximize the monetization of high-value IT services to business customers at the lowest possible costs.

Over 20 years of leadership

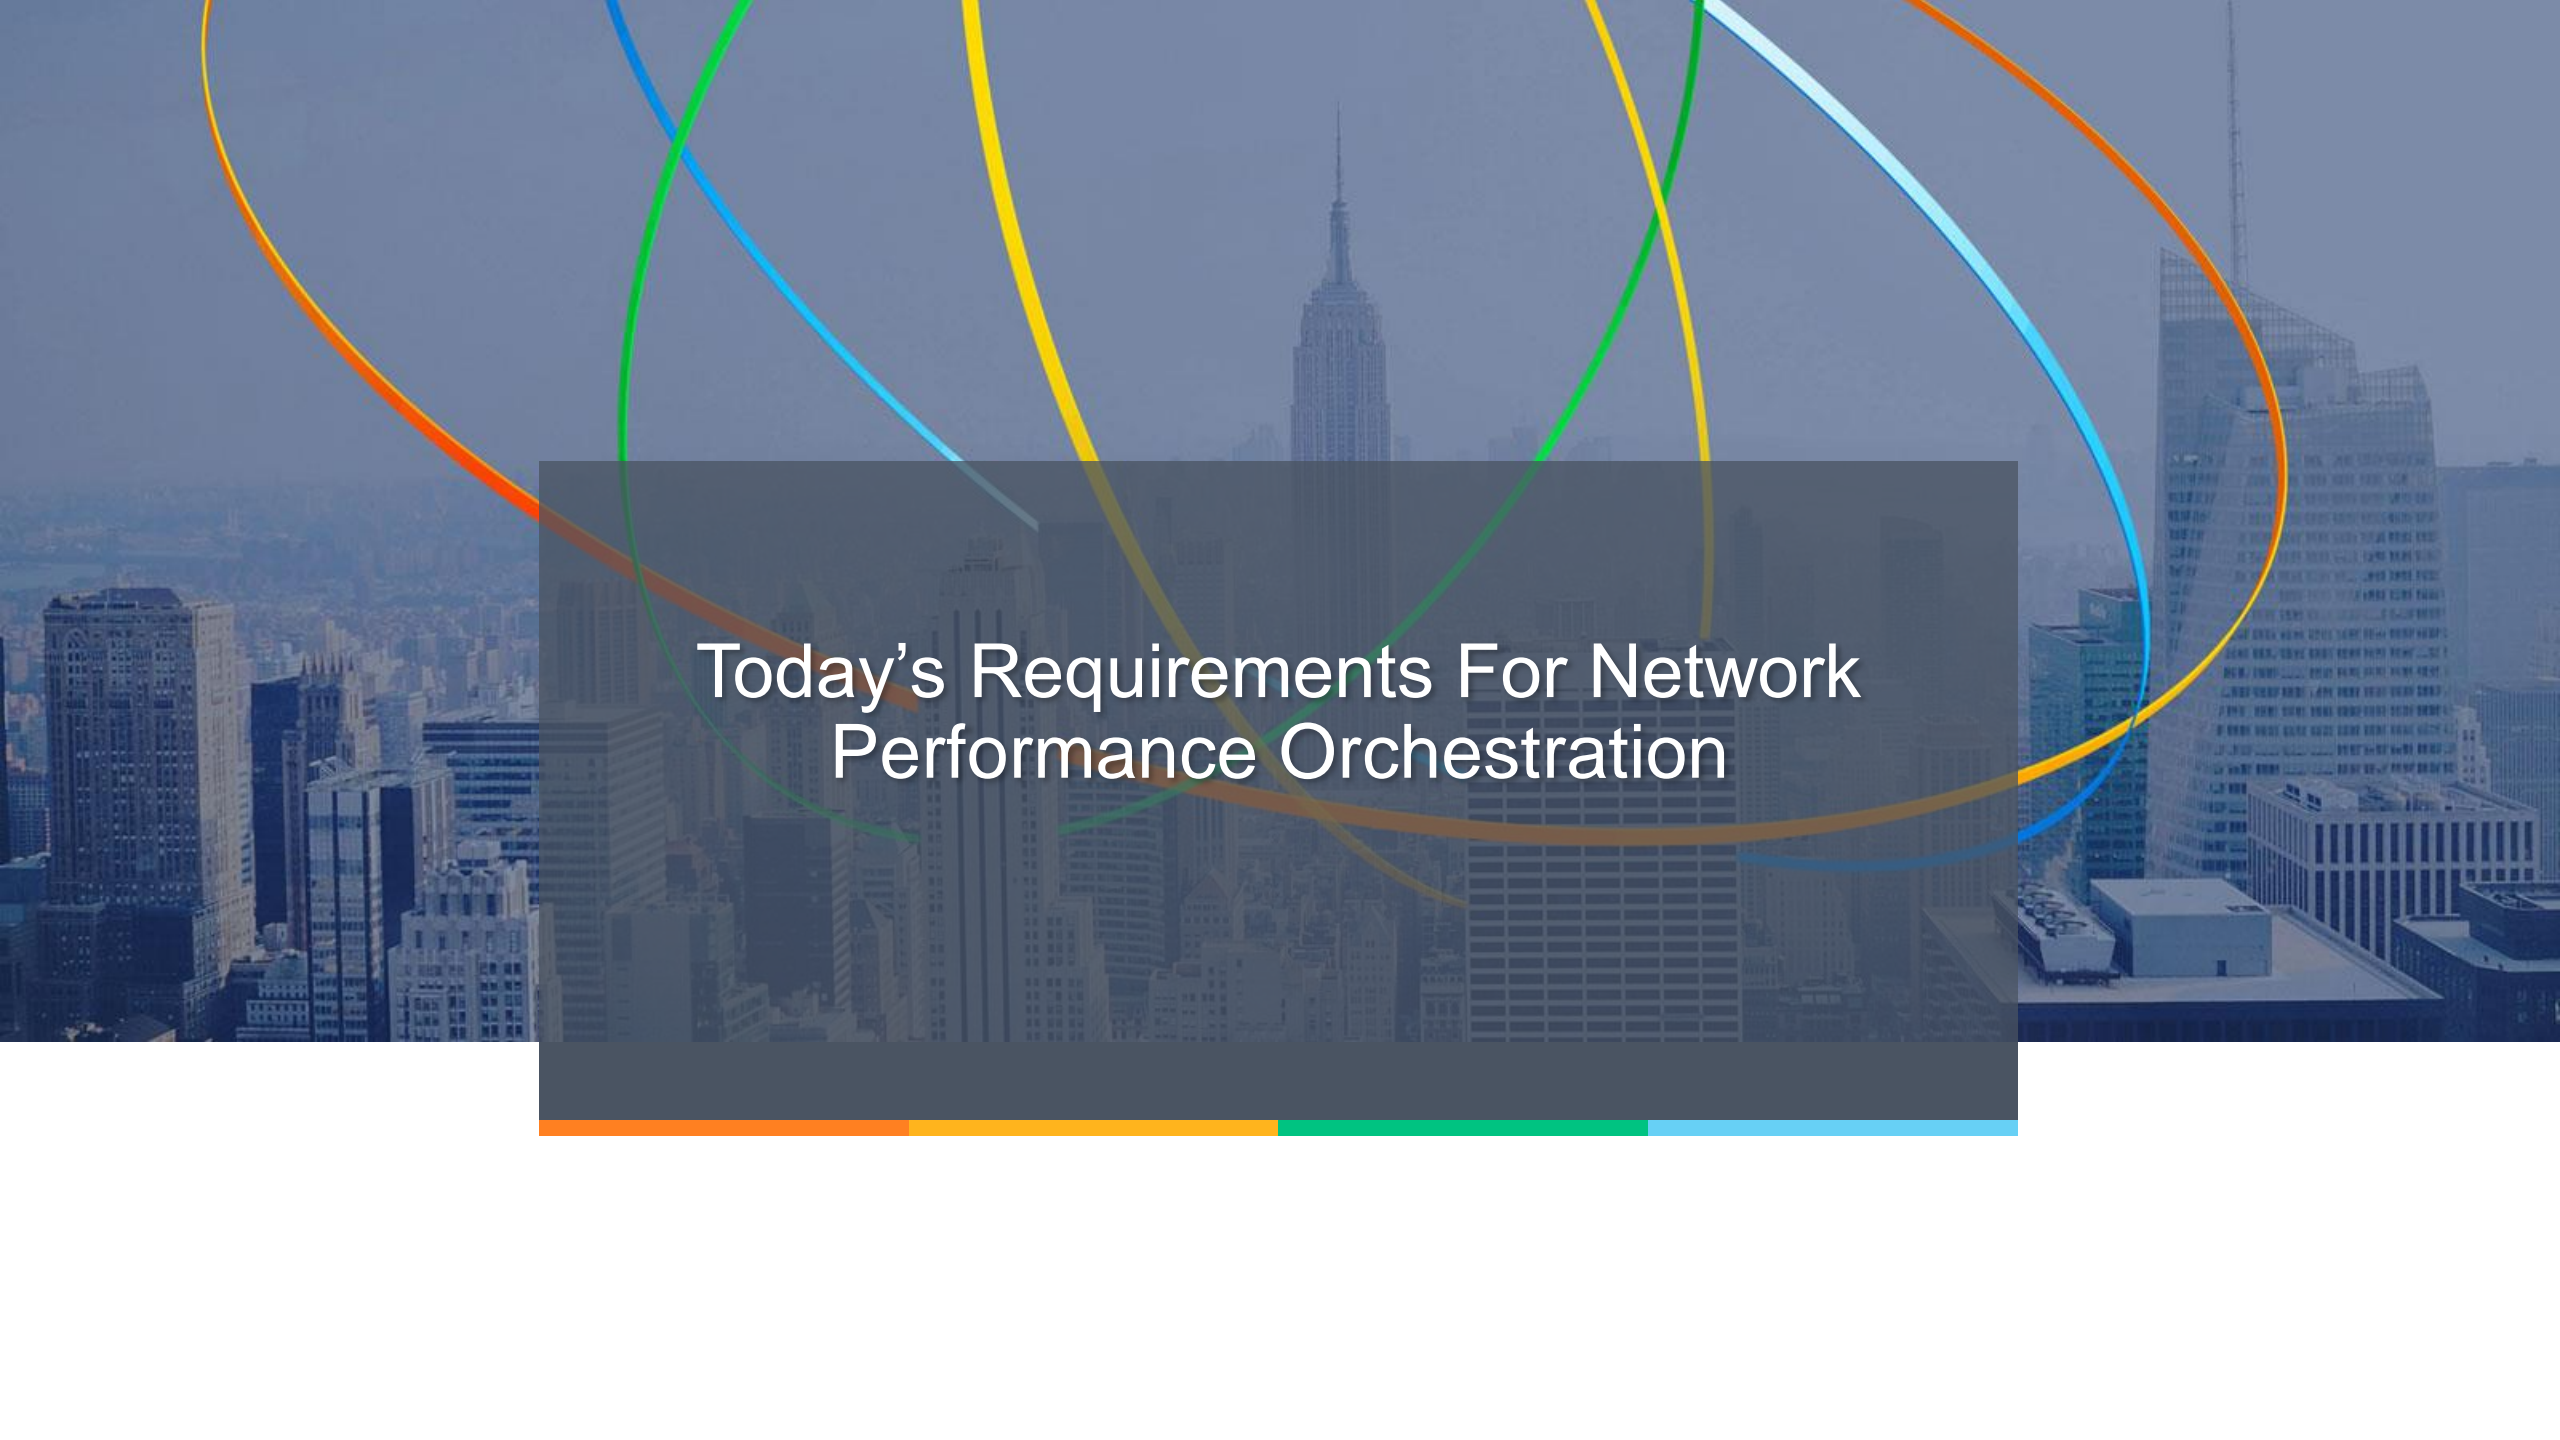

Mobile Operators

reduce costs, boost quality, and prepare for a 5G future with solutions for the entire network and service life-cycle, across the transport, mobile core, and radio network.

Agenda

- Today's requirements for network performance orchestration
- InfoVista TEMS Approach
- Ways to ensuring a cost efficiency
- Take away

Today's Requirements For Network Performance Orchestration

The Evolving Story of Networks

5G 

Advancing Generations

- 2G, 3G, 4G, 5G and beyond
- Several implicit features (IRAT, CSFB, CA, etc)

Changing End User Use Cases

- Voice, Data, Browsing, Streaming, New TV, OTTs

Large Network Footprint

- Main cities, small cities and remote areas
- Indoor coverage
- Roaming Support

Big Data Analytics

- Large volume of collected logs/information
- What does it all mean?

Competition

- Benchmarking results to guarantee acceptable performance

Device Performance

- Different device models behave differently and can impact the end user perception

Orchestrating the Network Performance – What is Needed?

Cost Effective Network Design and Rollout

Network Management

Feature Integration and Optimization

Testing, Monitoring, Benchmarking and Scoring

Subscriber Analytics

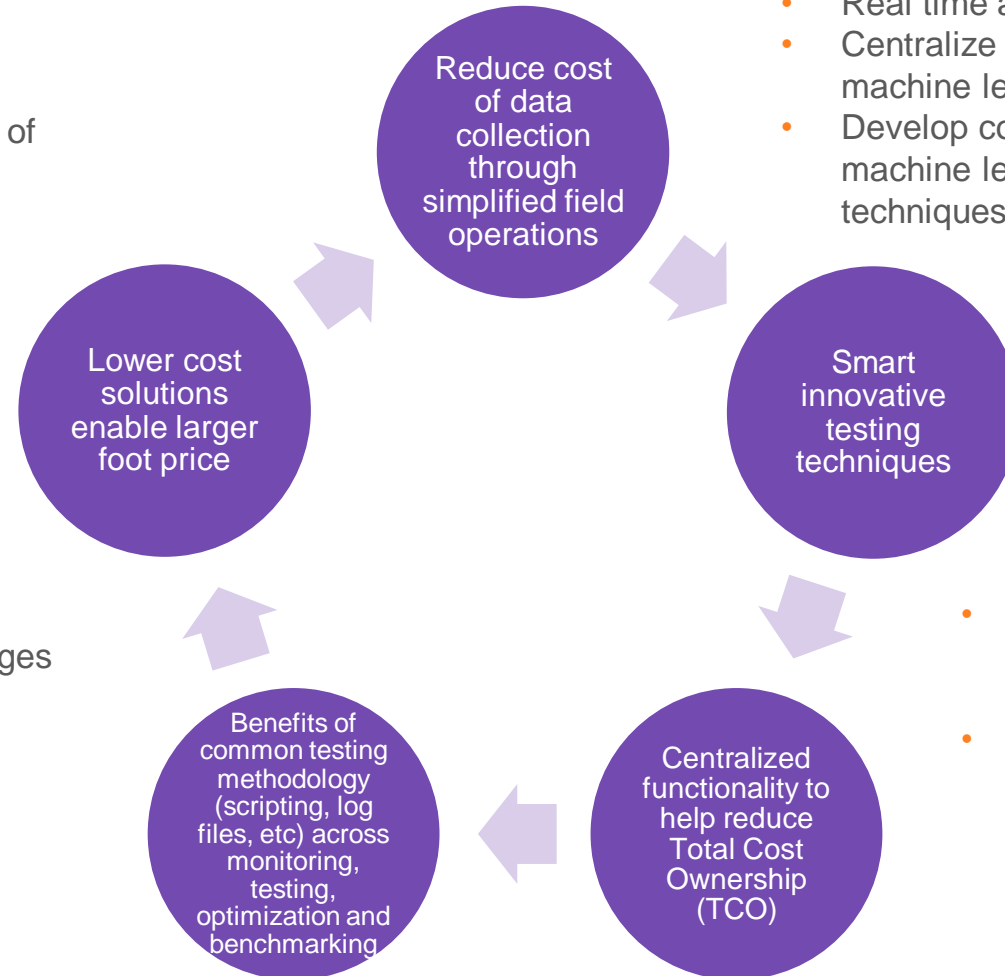

GeoAnalysis

Today's Requirements for Network Performance Orchestration

- Big data support
- Remote access for real-time view of network and test environment
- Cloud based testing solutions

- Big data support
- Real time analytics and root cause analysis
- Centralize and embed Subject Matter Experts into machine learning / artificial intelligence algorithms
- Develop cost efficient benchmarking solutions, new machine learning based QoS/QoE evaluation / monitoring techniques suited for OTT services on the path to 5G

- Common KPIs
- Same script leveraged across stages
- Reduce post processing cost and conflicting information

- Common Management platform of data collection for all stages (monitoring, testing, benchmarking, etc)
- License management and sharing across users

InfoVista TEMS Approach

The Benefits of TEMS Ecosystem

- Ability to test multiple operators at the same time
- How to rank them, more on the upcoming slides

- Top down approach to visualizing the network health
- Allows for more detailed log analysis

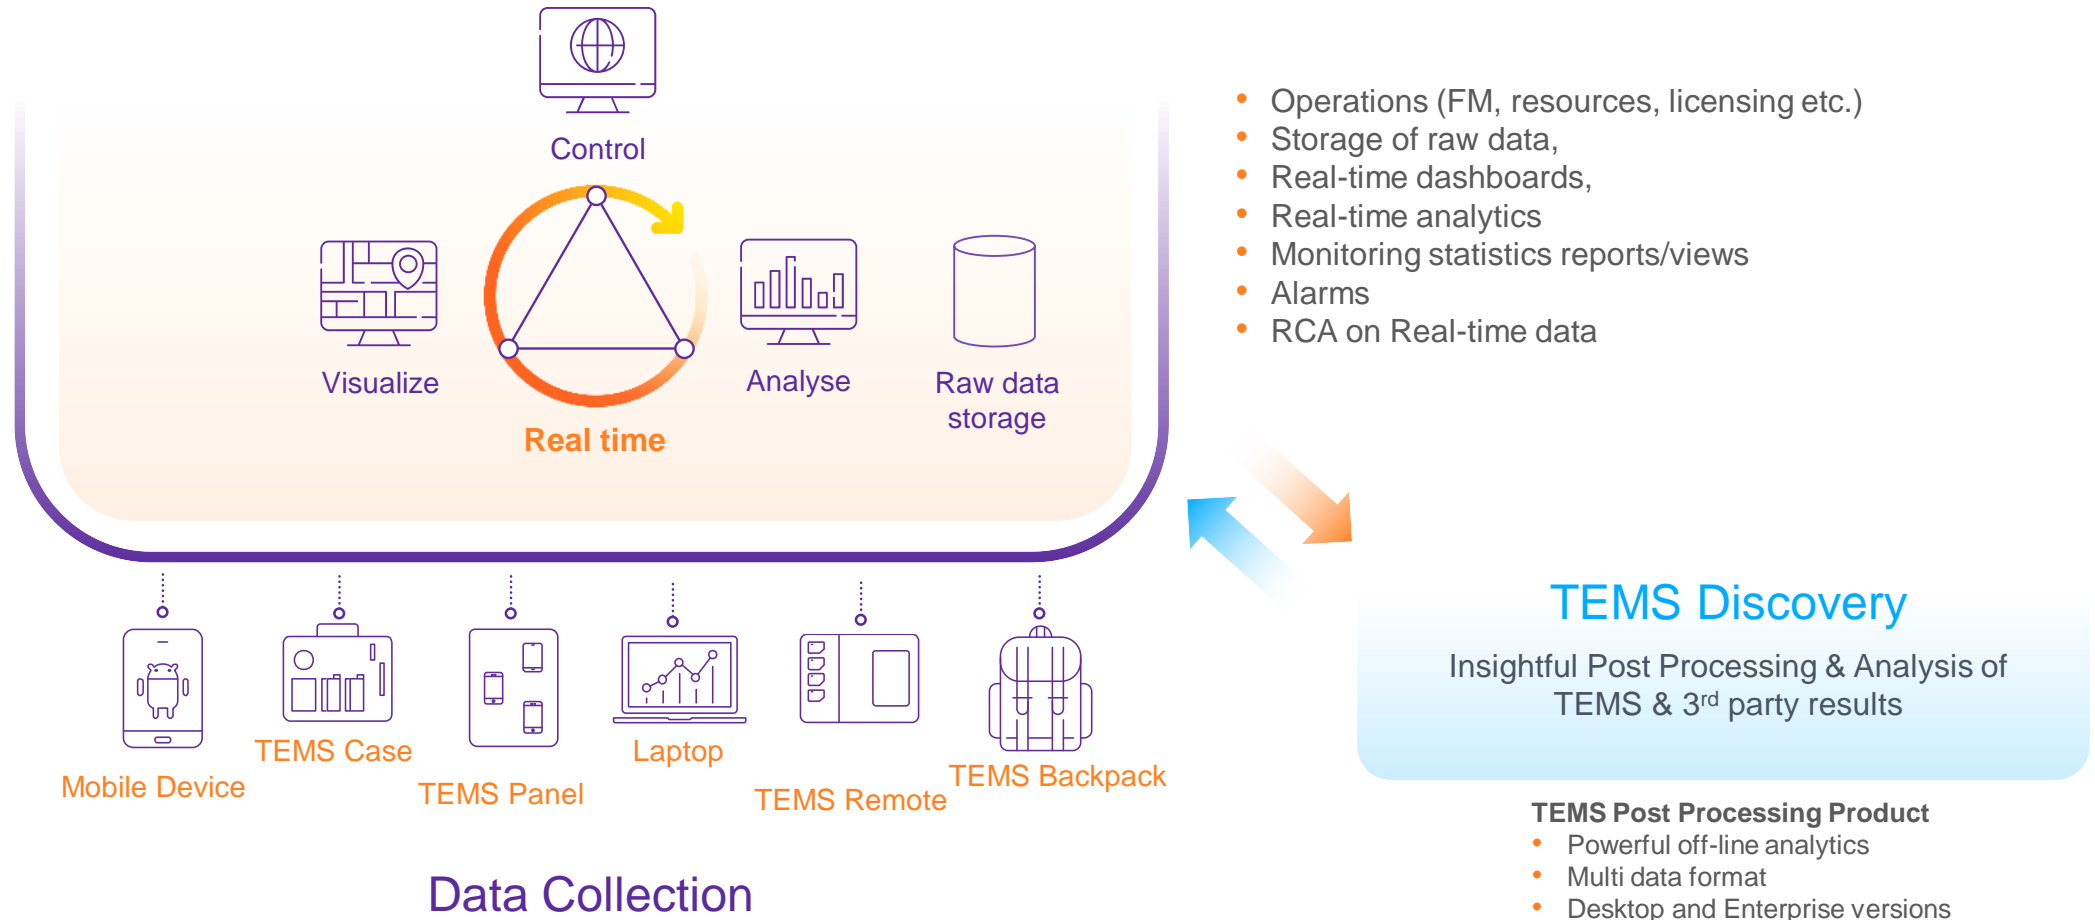

- TEMS sources out latest devices in the market that supports latest technologies from leading OEM and Chipset Vendors.
- Upgrade is easily done

- New use cases are added to the system
- Fleet manager can push new test cases to the testing solutions

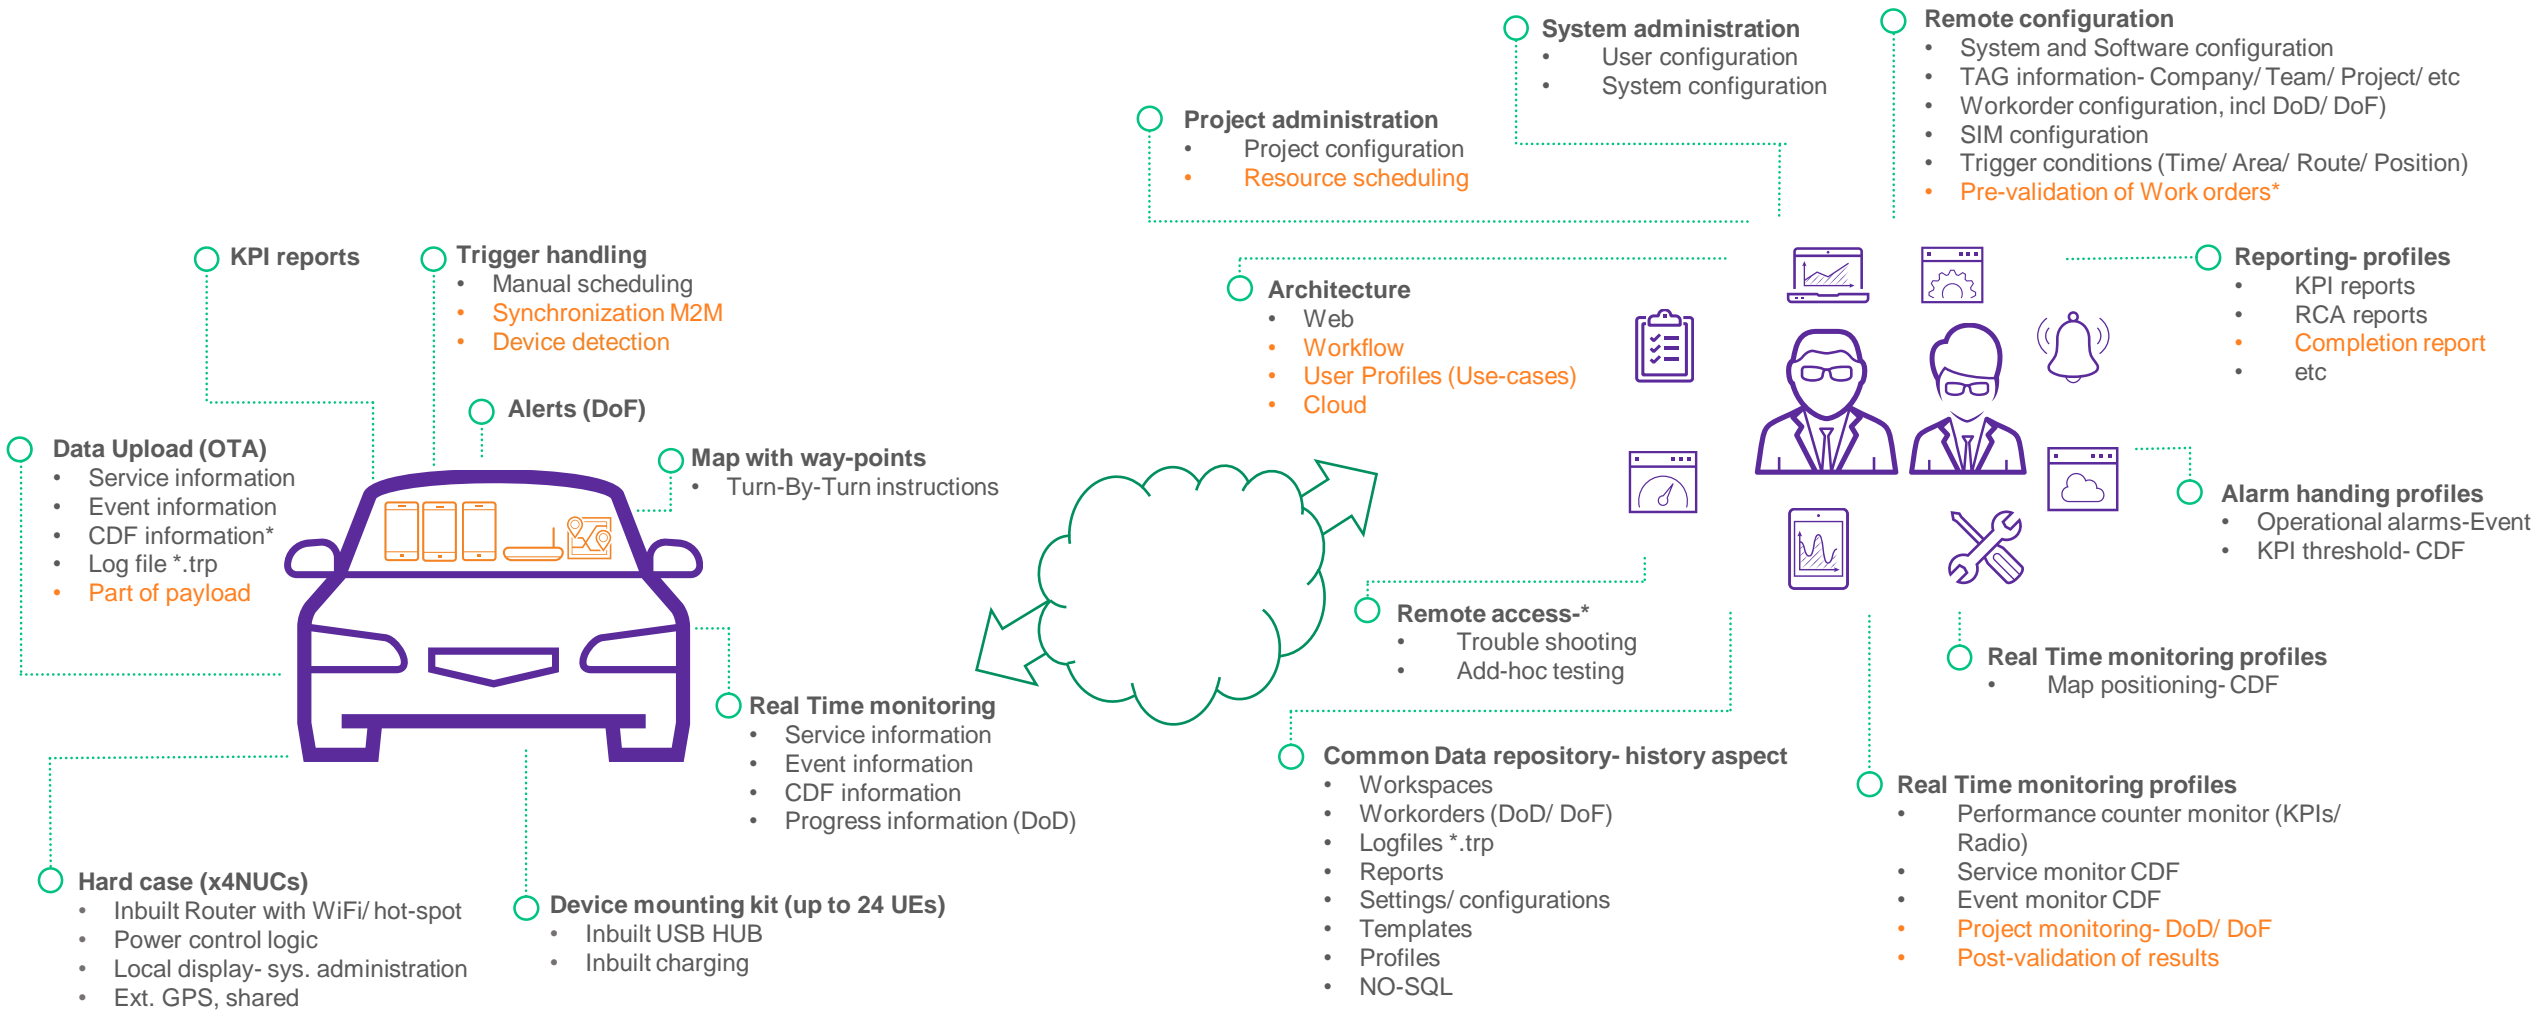

- Managing a large fleet from one console, the Fleet Manager
- Ability to deploy small or large testing solutions in any location

TEMS Approach to Performance Orchestration

Aligned with draft recommendation E.FINAD “Framework for Intelligent Network Analytics and Diagnostics”, TD 307 (TEMS contributors)

Benchmarking Needs & TEMS Solution

Ways of Ensuring Cost Efficiency

TEMS Testing Approach – Smart Testing

Aligned with draft recommendation E.FINAD “Framework for Intelligent Network Analytics and Diagnostics”, TD 307 (TEMS contributors)

DT & Indoor
Service Assurance
Benchmarking
TEMS
NETsmarts

VOLTE
ViLTE
VoWiFi/OTT
Video /OTT

SERVICE BASED CEX PERFORMANCE
STATISTICS & ANALYSIS

NETWORK UTILIZATION AND PERFORMANCE
EVALUATION & BENCHMARKING

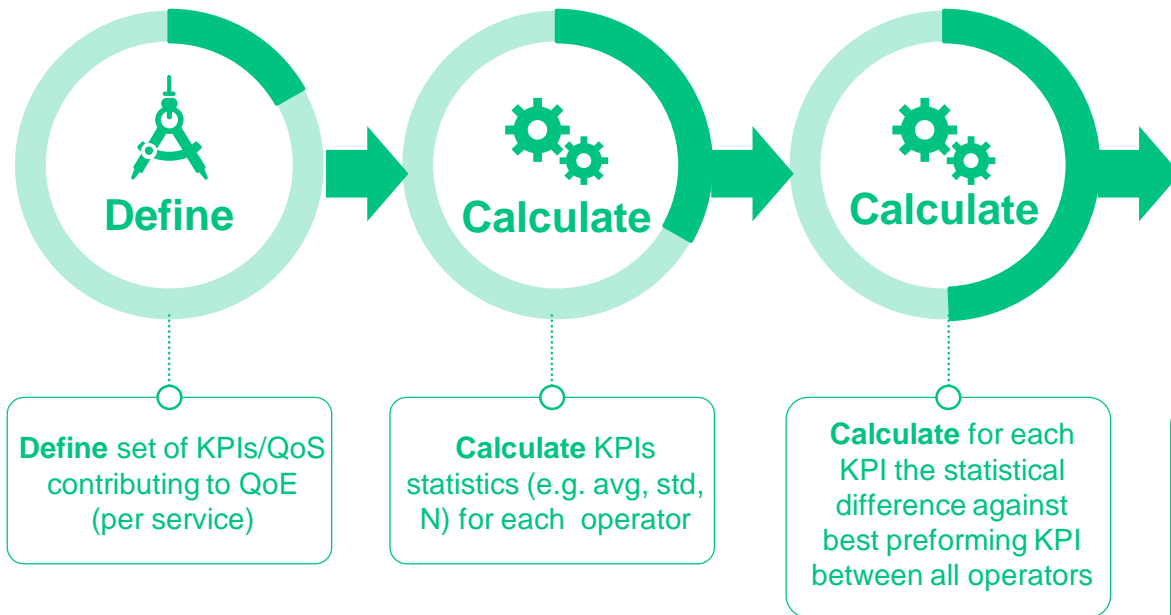

NETWORK DETAILS – ROOT CAUSE PER
SERVICE AND TECHNOLOGY

DEVICE/ CLIENT PERFORMANCE

Statistical scoring and ranking

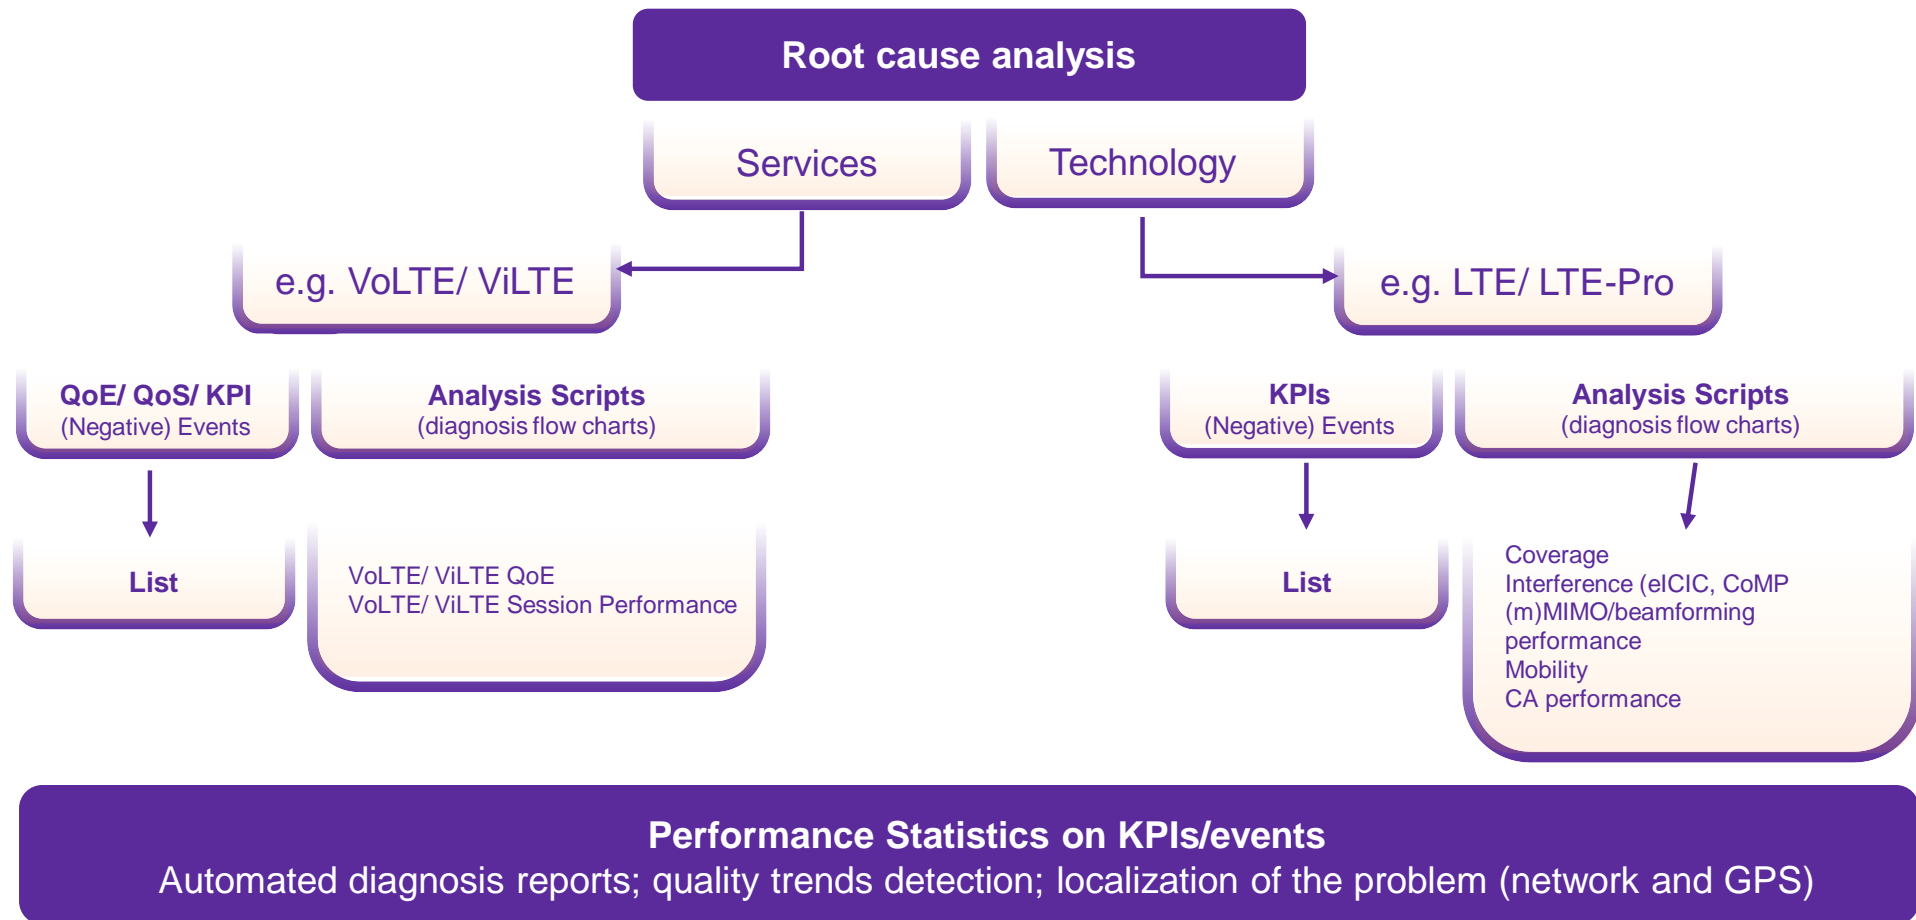

Aligned with draft recommendation E.NetPerfRank “Statistical Framework for QoE Centric Performance Ranking” (TEMS authors)

	Network 1				Network 2				Weight
	KPI	std	N	StatDiff	KPI	std	N	StatDiff	
Call Retention Rate	0.95	0.218	87	0.046	0.97	0.170587	69	0	30%
Call Setup Success Rate	0.93	0.255	87	0	0.91	0.286182	69	0.2343	30%
Voice Quality (MOS)	3.89	0.5	2600	0	3.56	0.7	2070	17.154	30%
Mouth to Ear Delay	105	5	435	42.67	70	15	350	0	5%
Voice Call Setup Time	1200	300	87	0	1800	275	69	12.31	5%
StatScore	2.1473				5.8319				
Rank	1				2				

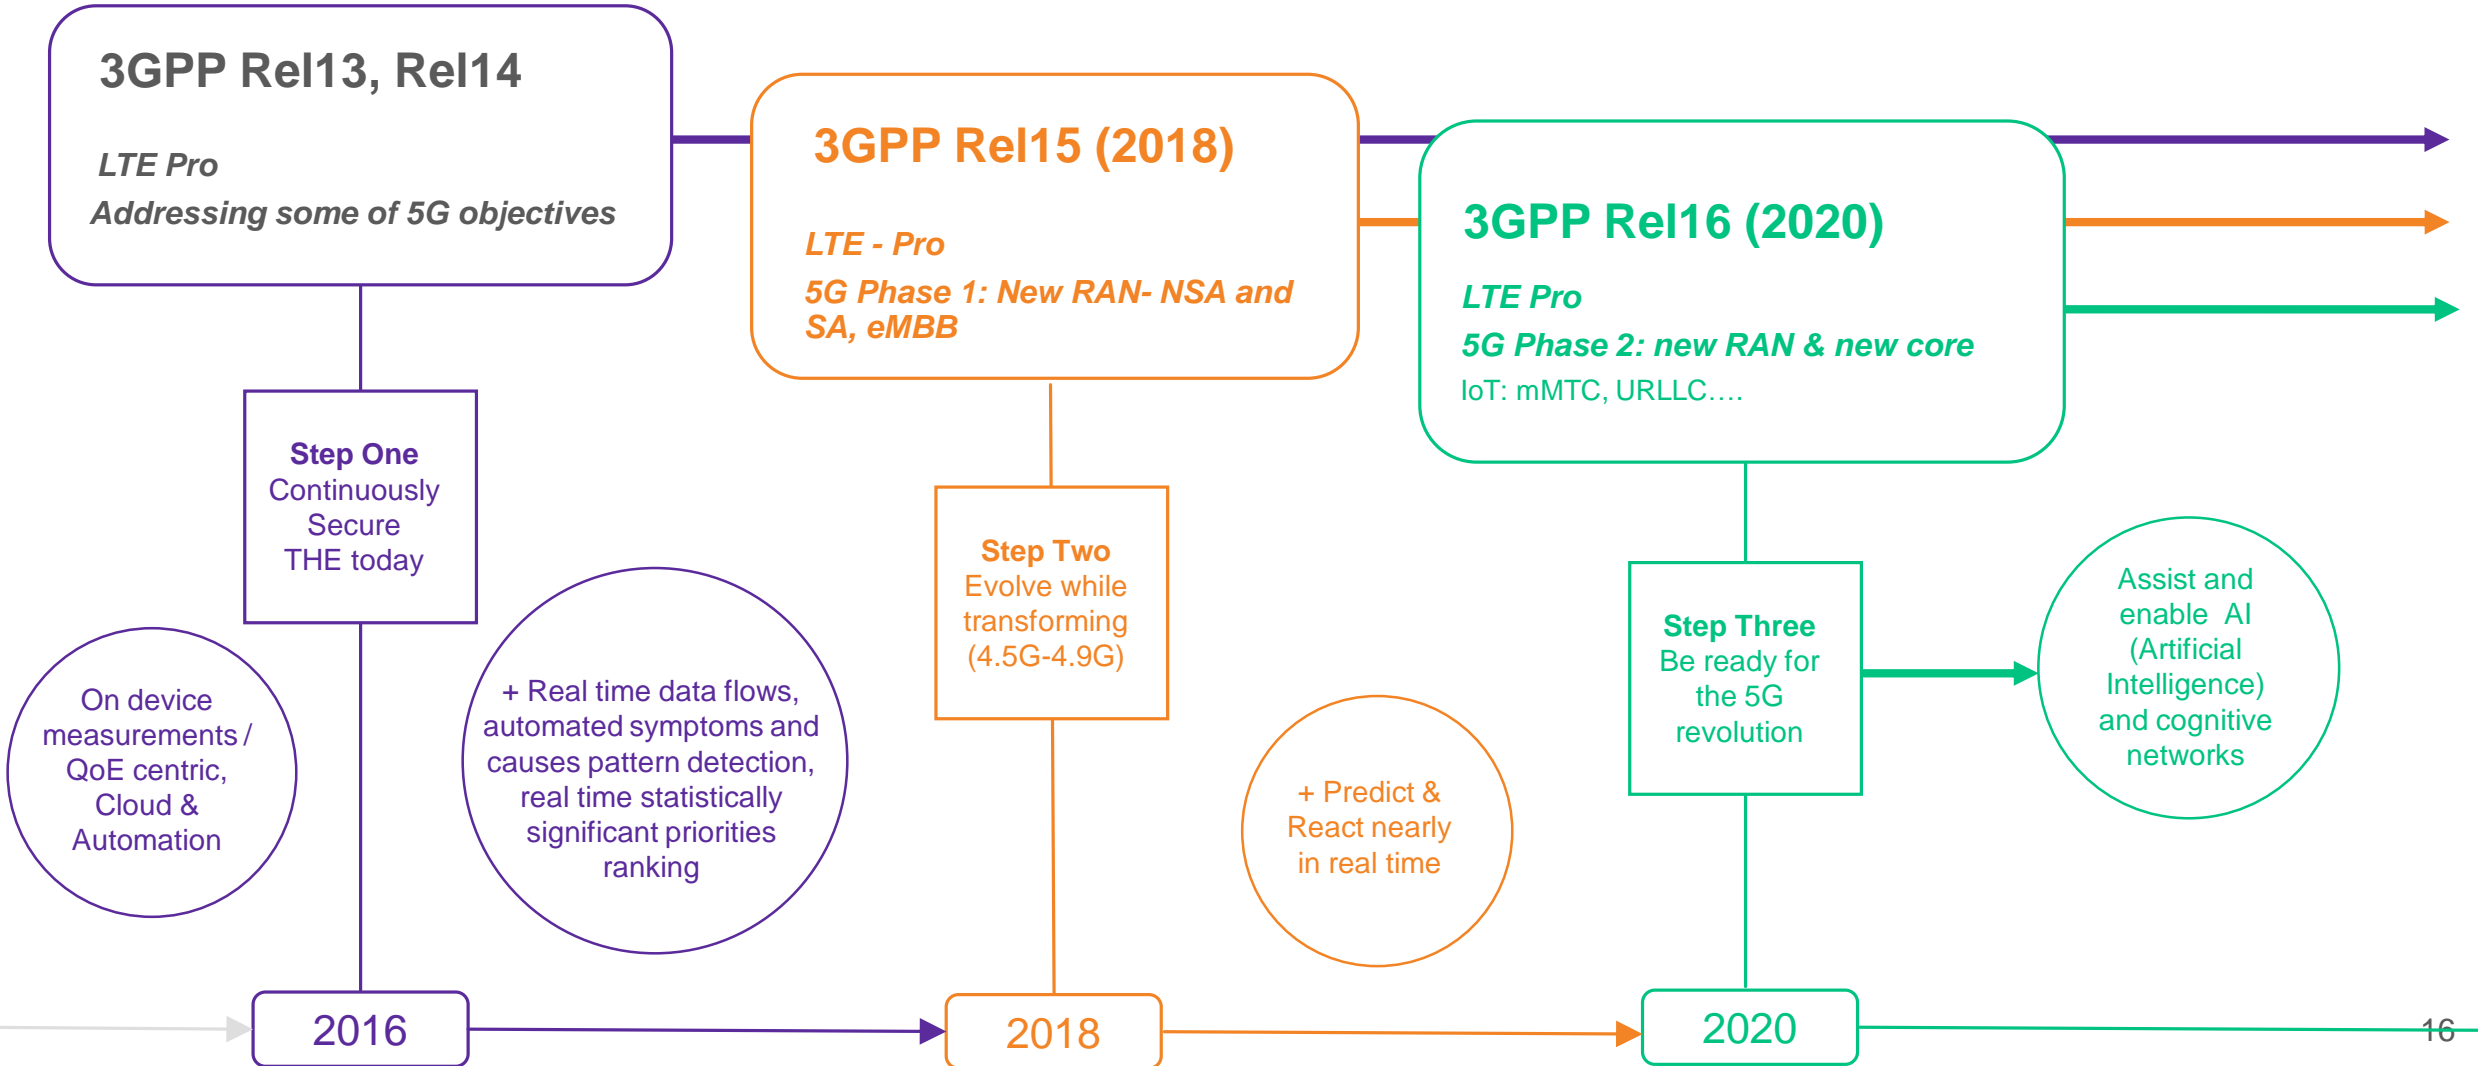

TEMS approach for service and technology centric root cause analysis

Aligned with draft recommendation E.FINAD “Framework for Intelligent Network Analytics and Diagnostics”, TD 307 (TEMS contributors)

Testing strategy aligned with technology evolution

Virtualization, distributed cloudification, slicing, edge computing

Take away

Take away

- Today's orchestration of the network performance is an ongoing effort with a lot of changing variables which impose new requirements on testing
- TEMS evolves along with the technology, adding automated processes and root cause analysis based on a top-down approach, statistical significant benchmarking as well as artificial intelligence and machine learning to our portfolio

Thank you!
