

# NETWORK PERFORMANCE FOR EMERGING SERVICES AND NON-HUMAN USERS

ITU Workshop on "Telecommunication Service Quality"  
Banjul (The Gambia) March 2023

Dr. Jens Berger  
Rohde & Schwarz mobile network testing

**ROHDE & SCHWARZ**

Make ideas real

# 4G AND 5G NETWORK POLICIES TODAY

*High attention on peak data rates in today's 4G/5G networks*

- ▶ Today's mobile networks are designed and **optimized for human users**
- ▶ What human users are doing today?
  - ▶ Retrieving of web content (→ more than 'browsing')
  - ▶ Streaming video
  - ▶ Posting to social media
  - ▶ Voice and video calls over IP
  - ▶ ...

- ▶ **Operators today mostly prioritize high data rates in DL direction**
- ▶ **'Performance' is often defined by 'maximum or average bitrate'. Is this sufficient?**

# MOBILE NETWORKS AND USE CASES

## Human use cases

- Telephony
- Browsing
- Video

## Non-human use cases (IoT)

- Powermeter
- Recycling
- Transport

## Cellular ('mobile') networks

\$\$\$

## Mission critical communication

(authorities, fire arms, civil protection,...)

- Telephony / Video call
- Data up- / download
- Video upstream (body cam, drone)
- Positioning

## Business critical communication

- Real-time factory control
- Tracking critical product transport
- Securing air corridors (drone transport)
- ...

...as today

(Telephony, streaming, retrieving web-content, file upload, video conferencing,...)

**Real-time interactive services**

(Gaming, VR/XR applications, smart home, remote control,...)

**Human + Non-human use**

- **Telephony / Push-to talk**
- **Modem devices (cam, drone)**
- Typical protocols and traffic patterns
- Video upstream
- Position tracking

**Non-human use cases**

- **Non-smartphone devices**
- **Different traffic and load patterns**
- Wide range of service requirements
- Potential use of low-layer protocols

...as today

**Real-time interactive services**

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

# QoS

- ▶ QoS / technical KPIs to test?
  - ▶ Real-time, interactive services need KPIs based on short-term evaluation
  - ▶ Statistics must reflect more than 'averages'  
*e.g. median instead of average for asymmetric distributed measurement values, percentile values consider peaks and undercuts*

- Bitrate / Throughput is nothing perceived by a human.
- Users experience 'time to do something' QoE should consider this

Vast majority of individual values below average.

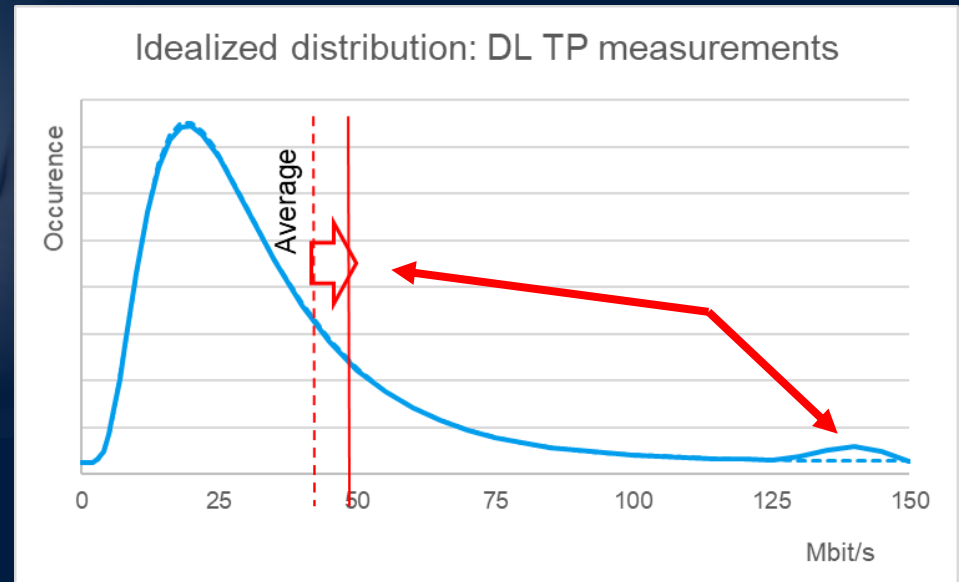

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

# QoS

- ▶ QoS / technical KPIs to test?
  - ▶ Real-time, interactive services need KPIs based on short-term evaluation
  - ▶ Statistics must reflect more than 'averages'  
*e.g. median instead of average for asymmetric distributed measurement values, percentile values consider peaks and undercuts*

- Bitrate / Throughput is nothing perceived by a human.
- Users experience 'time to do something' QoE should consider this

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

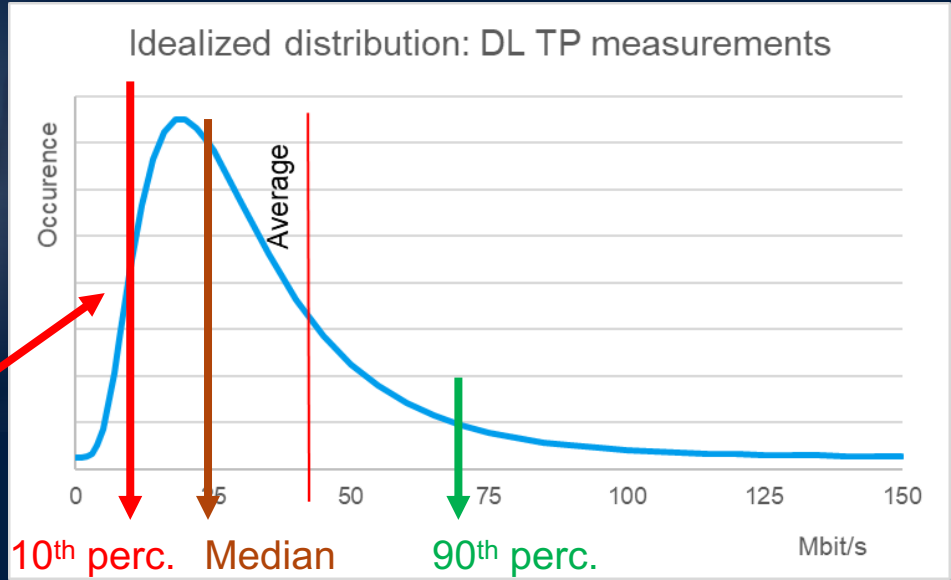

# QoS

- ▶ QoS / technical KPIs to test?
  - ▶ Real-time, interactive services need KPIs based on short-term evaluation
  - ▶ Statistics must reflect more than 'averages'  
*e.g. median instead of average for asymmetric distributed measurement values, percentile values consider peaks and undercuts*

## 'Percentiles' or 'threshold-exceeding'

- ▶ Focus on weak performance and help to drill-down and to improve
- ▶ Applied in network performance scoring as in **ETSI TR 103 559**

This is critical for the users

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

# QoS

- ▶ QoS / technical KPIs to test?
  - ▶ Real-time, interactive services need KPIs based on short-term evaluation
  - ▶ Statistics must reflect more than 'averages'  
*e.g. median instead of average for asymmetric distributed measurement values, percentile values consideration of peaks and undercuts*
- ▶ QoS measurements under realistic load conditions
  - ▶ Real services or applications  
*e.g. establishing a phone call, download a web page, streaming a video*
  - ▶ Generic tests creating realistic load  
*e.g. iperf emulating a data stream, realistic transfer rates as in ITU-T Y.1540 or G.1051*  
*Note: 'ping' is not stimulating realistic network traffic*

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

# QoE

- ▶ How to define and to model QoE for use cases and applications?
  - ▶ Subjective Evaluation of QoE
  - ▶ Objective QoE models for automated field testing
  - ▶ Later: What is about 'QoE' for non-human use cases?

- ▶ There are defined test setups for many QoE evaluations

- ▶ Example

Accurate objective models exist today:

- ▶ Speech Quality ITU-T P.863 'POLQA' (note person)
- ▶ Video Quality ITU-T J.341.x, P.120y.x (e for setup)

- ▶ Similar

...QoE of a service is more... (web-content)

# CONSEQUENCES FOR TESTING NETWORK PERFORMANCE

# QoE

- ▶ How to define and to model QoE for new use cases and applications?
  - ▶ Subjective Evaluation of QoE
  - ▶ Objective QoE models for automated field testing
  - ▶ What is about 'QoE' for non-human use cases?

- ▶ Simplified: What are aspects of 'experience'
  - ▶ **Success** of a service or application (complete)
  - ▶ **Time to ...** (Call setup, video start, web content)
  - ▶ **Quality of presentation** (speech/video quality)

- ▶ Many underlying QoS parameters
  - ▶ DNS resolution
  - ▶ Throughput, IP-Capacity
  - ▶ Latency, latency variation
  - ▶ Loss, discontinuous transmission

# QoE

→ How to apply in real field?

# EVALUATION OF NETWORK PERFORMANCE

- ▶ Often 'network performance' is used equivalent to 'data speed' or 'bitrate'
- ▶ Network performance is more, it should consider all dimensions of network use
  - ▶ *What are use cases or services and how important are they?*
  - ▶ *How to derive a QoE performance per service?*
- ▶ A network is not a single point, it is deployed region- or country-wide
  - ▶ *How to aggregate performance measures across a region or a country?*
- ▶ A network is not homogenous, not geographically and not technology-wise.
  - ▶ *How to consider a wide variation of local performances*
  - ▶ *How to stay technology-agnostic?*

# EVALUATION OF NETWORK PERFORMANCE TYPICAL USE CLASSES IN PUBLIC NETWORKS

*P2P direct  
real-time connection*

**Telephony**

*Continuous transfer  
of media, real-time*

**Streaming media  
Online gaming**

*Up- or download files*

**Messaging  
Browsing  
Social media  
File transfer**

*Network performance  
on low layer*

**Data speed**

**Performance 'scoring' must cover all aspects of network use**

# PERFORMANCE SCORE

# COVERS ALL USE CASE CLASSES

*P2P direct real-time connection*

## Telephony

- 2G/3G Call
- VoLTE Call
- WhatsApp (VoIP)

*Focus on mobile-to-mobile*

*Receiving / sending media w/ motion, real-time*

## Streaming media

- YouTube Full HD
- YouTube 4K
- Facebook Watch

*Up- or download files*

## Messaging

- SMS/RCS messaging
- WhatsApp messaging

## Social media

- Browsing (Retrieving)
- Posting
  - Facebook
  - Instagram
  - Twitter

## File transfer

- HTTP file transfer
- FTP file transfer

*Network performance on low layer*

## Data speed

- HTTP/TCP Capacity
- FTP Capacity
- UDP Capacity

## Transport latency

- UDP latency / Interactivity
- HTTP/TCP latency

## Transport continuity

- iPerf3

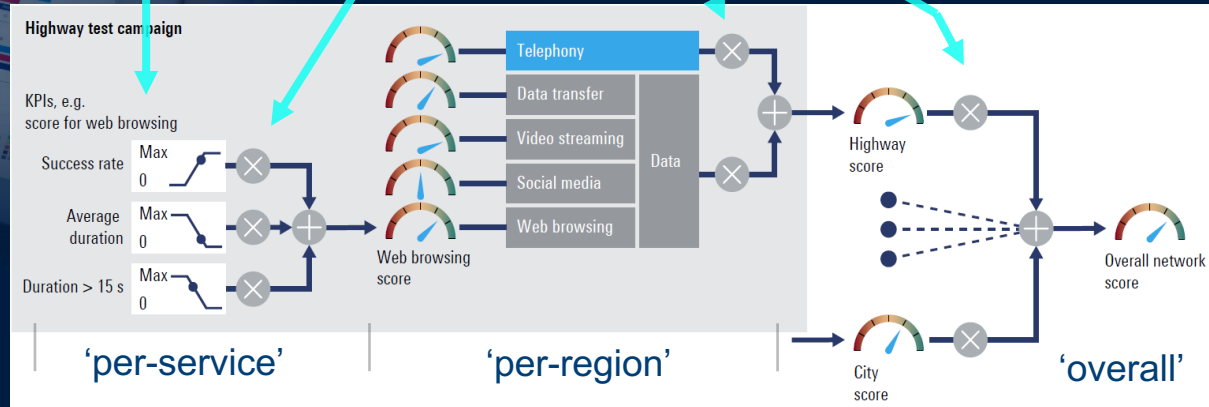

# NETWORK PERFORMANCE SCORE IN PRINCIPLE: AN AGGREGATION MODEL

Each technical KPI is transformed to a perceptual point scale. This makes the KPIs directly comparable (same scale).

Each KPI is weighted according to its importance and further combined and aggregated with other KPIs.

# SCORING NETWORK PERFORMANCE

Integrated score per 'service'

All technical KPIs 'as usual' are measured, accessible and reported

You will not lose any detail!

# SCORING NETWORK PERFORMANCE

Integrated score 'overall'

Integrated score per 'region'

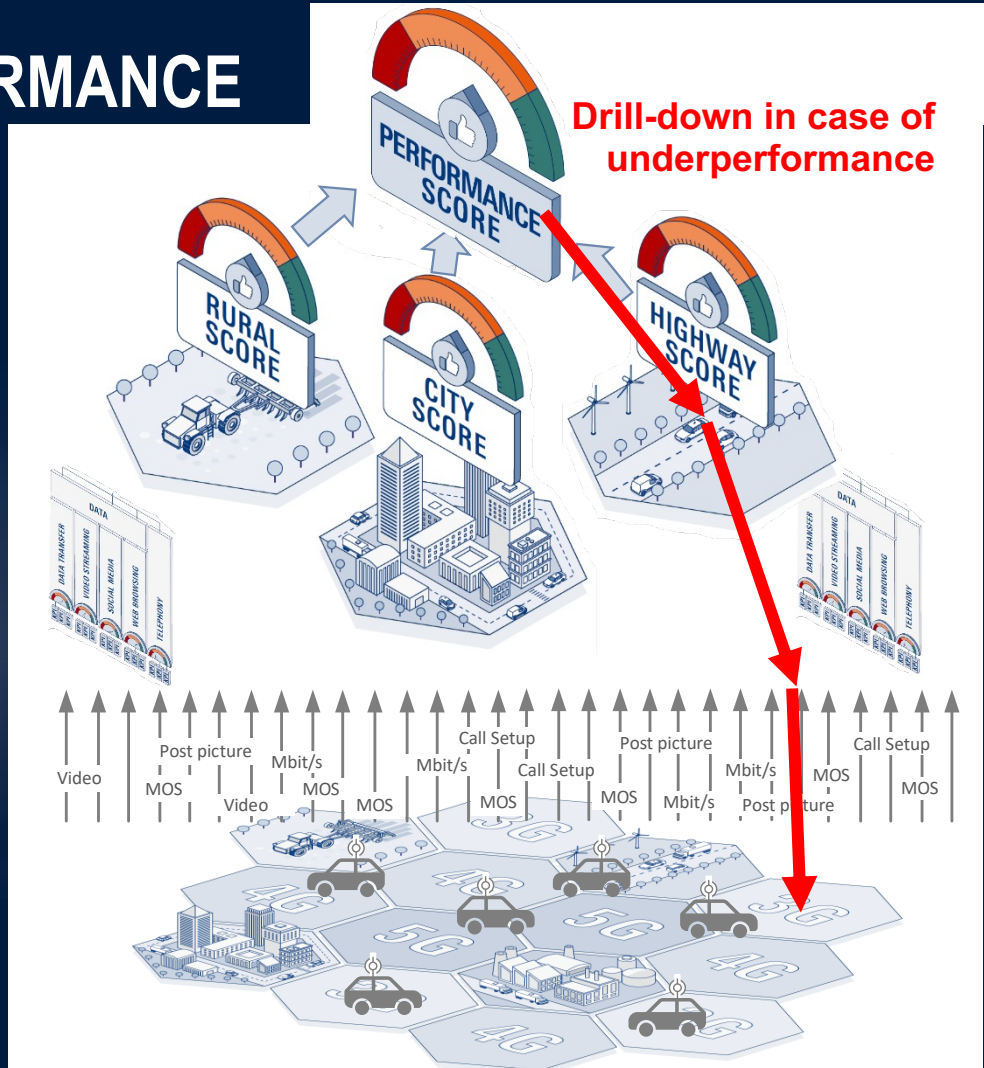

Integrated score per 'service'

All technical KPIs 'as usual' are measured, accessible and reported

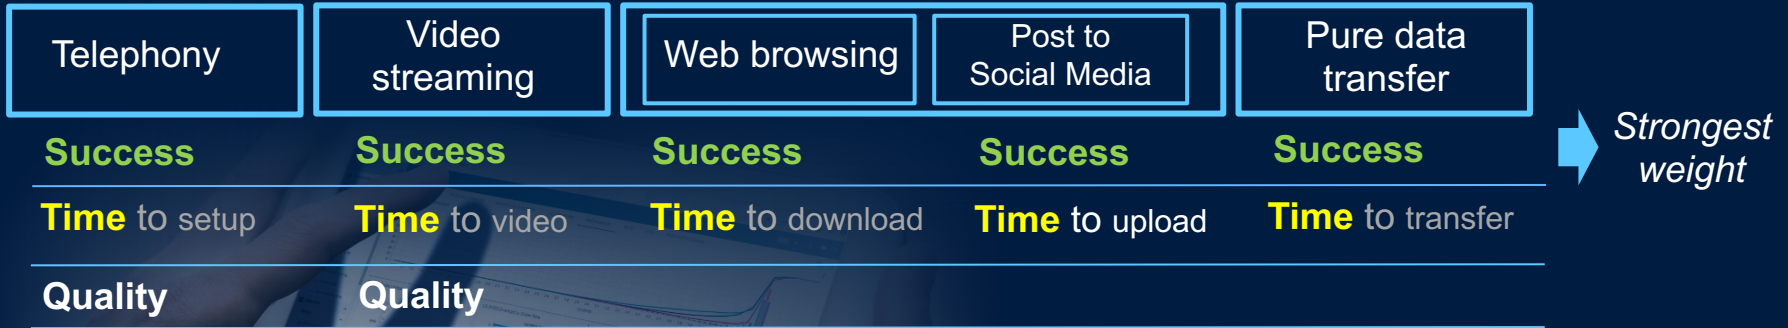

You will not lose any detail!

# NETWORK PERFORMANCE SCORE

## SIMPLE CONSTRUCTION PRINCIPLE

40% in overall

*Strongest weight of data services*

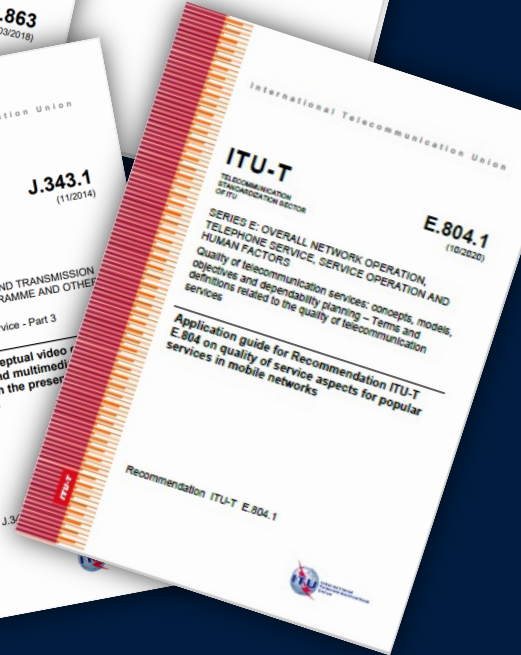

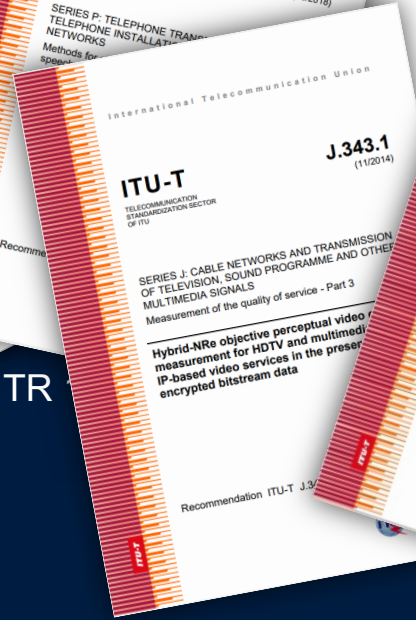

### General

- Success counts most for all services
- Time to complete is second most important for all services
- Earning extra points for extraordinary performance
- Losing extra points for weak performance

# ETSI TR 103 559 ROBUST SCORING NETWORK PERFO

- ▶ TR 103 559 describes the methodology, the guidance for scoring network's end-to-end performance
- ▶ TR 103 559 methodology is technically aligned with ITU-T E.804.1
- ▶ Referenced in ITU-T E.804.1 and ITU-T J.343.1
- ▶ Scoring is based on standardized test methods:
  - ▶ Telephony: ETSI TR 103 559
  - ▶ Speech Quality: ITU-T P.863
  - ▶ Video/YouTube: ETSI TR 103 559
  - ▶ Video Quality: ITU-T J.343.1
  - ▶ Data Transfer: ETSI TS 102 230
  - ▶ Browsing: ETSI TS 102 230

# ETSI TR 103 559 ROBUST SCORING NETWORK PERFO

- ▶ TR 103 559 describes the methodology, the guidance for scoring network's end-to-end performance
- ▶ TR 103 559 methodology is technical
- ▶ Referenced in ITU-T E.804.1

▶ Scoring is

- ▶ Telephony
- ▶ Speech

- ▶ Video/YouTube:
- ▶ Video Quality:
- ▶ Data Transfer:
- ▶ Browsing:

- ▶ Obtaining the KPIs according to standard
- ▶ Aggregating to Performance Score
- ▶ Statistical Evaluation
