

Title of the presentation: “Achievements of FG Network 2030”

Abstract of the presentation:

The presentation will provide an overview of the progress of the ITU-T Focus Group on Technologies for Network 2030 (FG NET-2030), established by ITU-T Study Group 13 at its July 2018 meeting. It will introduce at first organizational aspects of the Focus Group (including structure, terms of reference, leadership, meetings and participation). It will then highlight the key work items progressed by the FG, including achievements at present time and relevant future steps. In this context, some details about representative use cases and associated key network requirements identified by sub-G1, new network services investigated by sub-G2 and elements of the architectural framework study conducted by sub-G3 will be provided.
