# Europe: TM-Alliance, facilitating e-Health Interoperability

Cristina Bescos

European Space Agency

Workshop on Standardization in E-health  
Geneva, 23-25 May 2003

# eHealth: The European Case

- o European Union:
  - Strong legal infrastructure/ Protection of Privacy Rights
  - Parallel non-coordinated technical developments
  - Good Medical Care Delivery
  - Population aging
- o Different Countries:
  - Cultural/Regional/Medical Infrastructure
  - Maturity level in Health Telematics

## The need for interoperability

- Right of freedom of movement within EU
  - Right to receive the necessary health care
- Obstacle for Investments
  - Risk to loose previous incompatible solutions
  - EHR
  - Critical Mass
- Ensuring the quality of care
- Distribution of the points of care

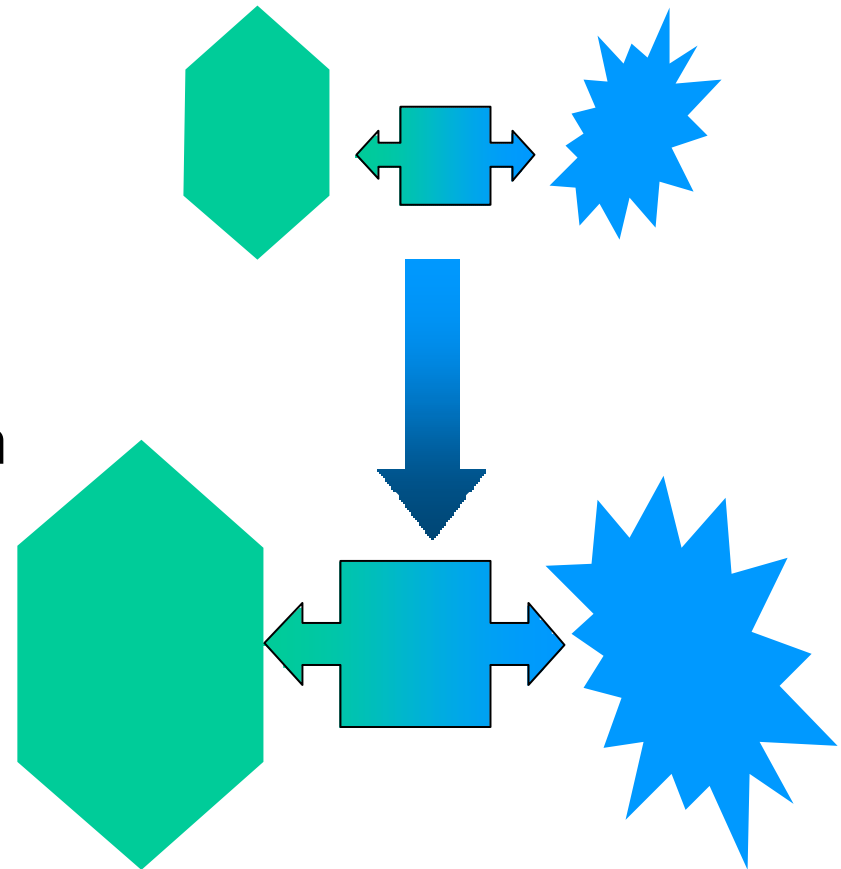

# The echelons of interoperability

## o Interoperability in:

- Technical standards
- Medical procedures
- Organisational protocols
  - reimbursement, certification
- Legal framework
- Political decisions

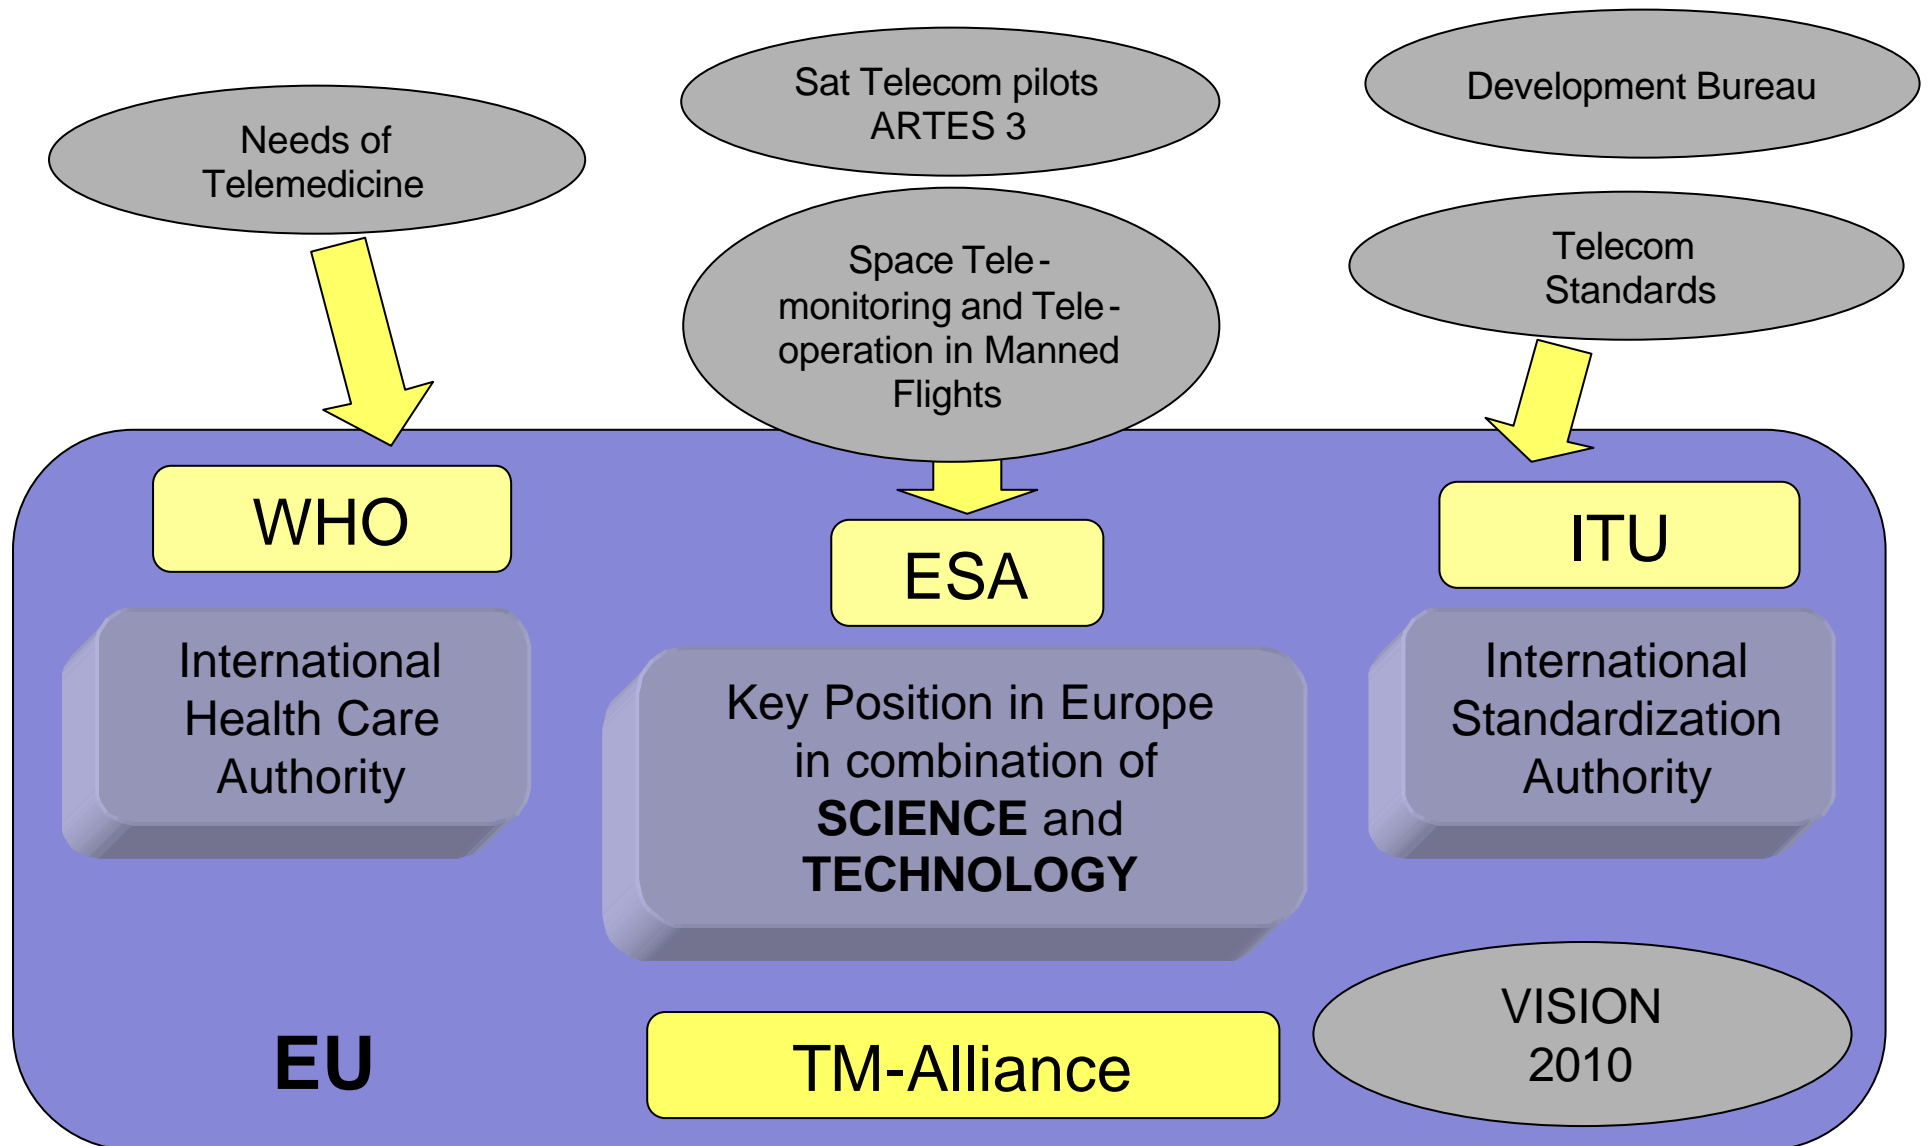

Time??????

# TM-Alliance

## TM-Alliance and Interoperability

- o **Gathering** multidisciplinary and international experts for the **definition** of Interfaces
- o **Promoting and facilitating consensus**
- o **Disseminating** the agreements among the national policy makers, mass media and general public.

## TM-Alliance and Interoperability

*“There is a risk that existing important results of the European standardization efforts in this area are not taken up simply because they are not always known, neither to buyers nor to suppliers.*

*The use of experts to produce standards does not ensure **dissemination** to the wider community; only adequately resourced, technically expert, publicists can ensure this.”*

Market, environment and objectives of CEN/TC 251 (2000)

# TM Alliance Workshop: Electronic Cards in Citizen Health Care

WHO European Office for Integrated Health Care  
Barcelona, 13-15 March 2003
