Transparency**

**IPsec**

**FOG**

**Issues**

# v6 Roadmap Scenarios

	<b>Scenario 1</b>
<b>IPv6 Deployment</b>	<b>Successful</b>
<b>Address Transparency</b>	<b>Restored e-2e</b>
<b>IPsec</b>	<b>Works e-2-e</b>
<b>FOG</b>	<b>Fog Clears!</b>
<b>Issues</b>	<b>Intranet, Proxies &amp; Firewalls may remain</b>

# v6 Roadmap Scenarios

	Scenario 1	Scenario 2	
IPv6 Deployment	Successful	Complete Failure	
Address Transparency	Restored e-2e	Sub-scenario 1 Recycling IP Addresses	
IPsec	Works e-2-e	Limited	
FOG	Fog Clears!	Noticeable Fog	
Issues	Intranet, Proxies & Firewalls may remain	Generalised use of NAT, RSIP?	

# v6 Roadmap Scenarios

	Scenario 1	Scenario 2	
IPv6 Deployment	Successful	Complete Failure	
		Sub-scenario 1	Sub-scenario 2
Address Transparency	Restored e-2e	Recycling addresses	Exhaustion NAT-o-NAT
IPsec	Works e-2-e	Limited	Broken
FOG	Fog Clears!	Noticeable Fog	Permanet Thick Fog
Issues	Intranet, Proxies & Firewalls may remain	Generalised use of NAT, RSIP?	NATs between even ISPs

# v6 Roadmap Scenarios

	Scenario 1	Scenario 2		Scenario 3
IPv6 Deployment	Successful	Complete Failure		Partial
		Sub-scenario 2.1	Sub-scenario 2.2	
Address Transparency	Restored e-2e	Recycling addresses	Exhaustion NAT-o-NAT	Partial
IPsec	Works e-2-e	Limited	Broken	Partial
FOG	Fog Clears!	Noticeble Fog	Permanet Thick Fog	Noticeble Fog
Issues	Intranet, Proxies & Firewalls may remain	Generalised use of NAT, RSIP?	NATs between even ISPs	Similar to v4-2-v6 Transition

# **The Culture Shock !**

## **Bell Heads**

**The people who know how to operate massive mission - critical networks will control the Net**

## **Net Heads**

**The people who get it will run it**

## **Melting Pot**

**Established carriers will hire Internet geeks and buy ISPs, and NG service providers will bring in experienced pros**

# Bell Heads

- ✎ **Central control is a must.**
- ✎ **The only way to scale the infrastructure is with a hierarchical, unified system architecture.**
- ✎ **Web-centric computing is an extension of the mainframe era.**
- ✎ **‘Bet you `re glad you don`t have to reboot your phone when you need to dial 911!**
- ✎ **Contradiction: Deregulation and technical innovation have made it impossible to maintain control of ifThe System.IT**

# Net Heads

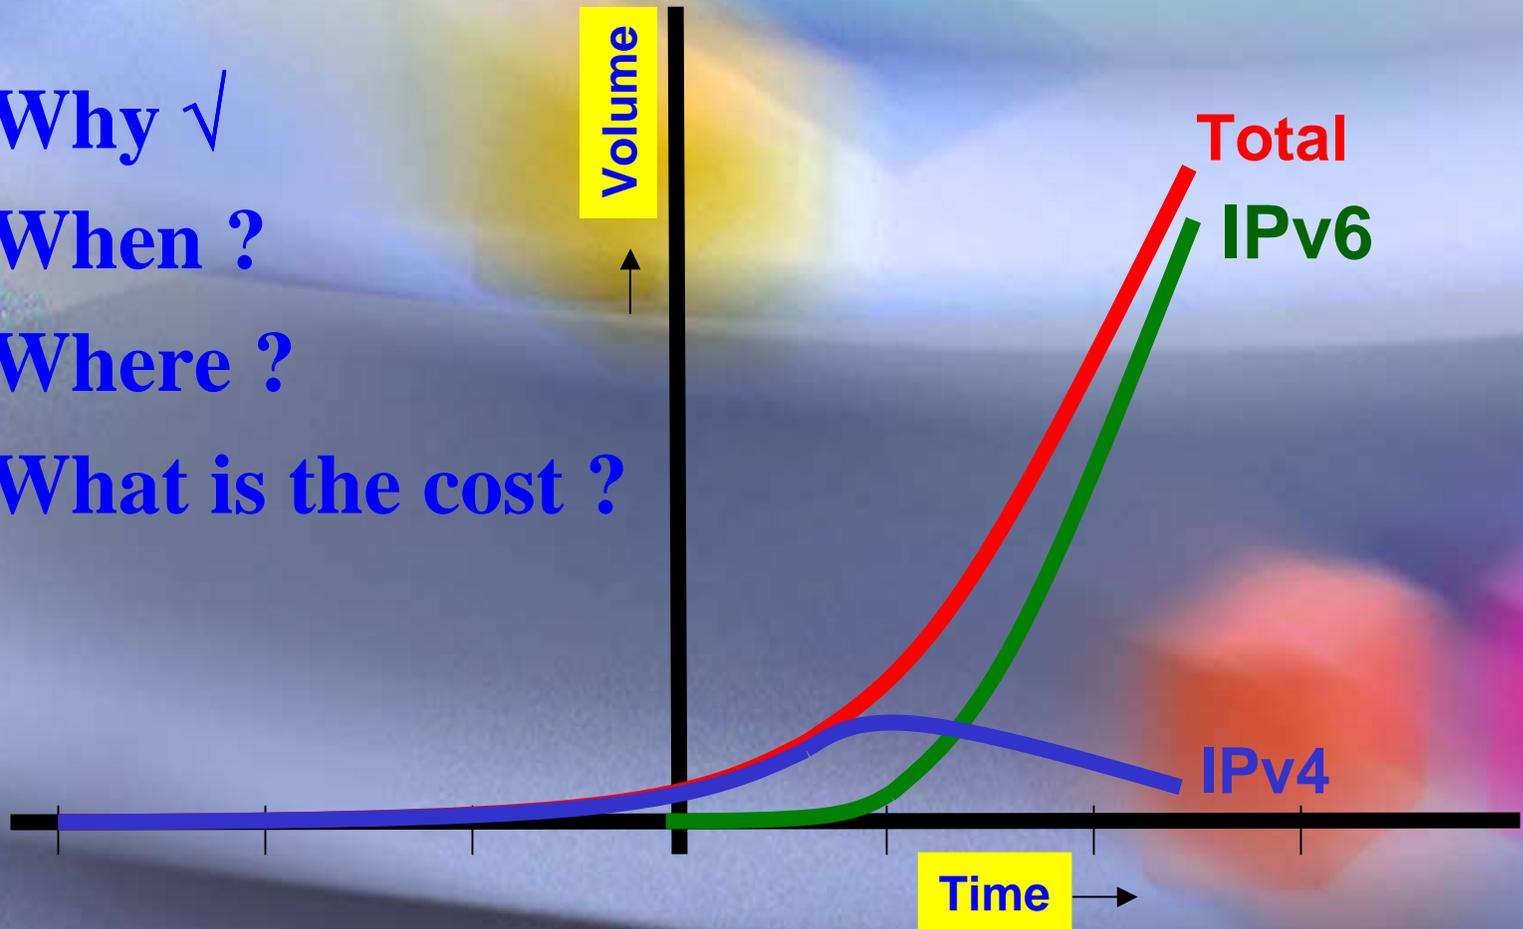

-  ★ Chaos is good for creativity.
-  The only way to scale the Net is with decentralized architecture and control.
-  Peer-to-peer networking is an extension of the PC revolution.
-  ★ Information (software, music, etc.) wants to be free. »
-  Contradiction: Now that the 25-year adolescence of the Net is over, and businesses want to use it for e-commerce, the Net must grow up or get adult supervision.

# IPv6 : An e-Buisness Enabler

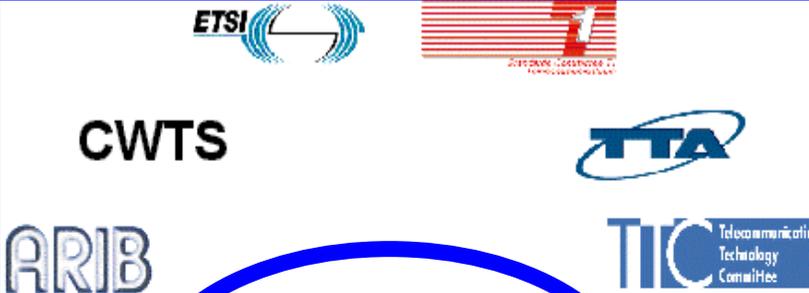

<b>Critical Success Factor</b>	<b>Today with IPv4</b>	<b>IPv6</b>
<b>Cost Effectiveness</b>	Costly workarounds	>1 billion addresses / person
<b>Flexibility</b>	Frequent renumbering as site grows	Simplified network planning and management
<b>Reliability</b>	Operational complexity	Return to simple and scalable architecture
<b>Availability</b>	Single points of failure	24x7 operation
<b>Scalability</b>	Client/server	Peer-to-peer
<b>Accessibility</b>	Obstacles to deploying next generation applications (e.g., VoIP )	Pervasive enabler Simplified application development
<b>Security</b>	Interferes with some applications	Enabler for end-to-end security

# The BIG Questions!

- Why ✓
- When ?
- Where ?
- What is the cost ?

  - IPv6 Operation Study Group
- Publication
  - IPv6 Journal (RIIS)
  - v6start (Nikkei BP)

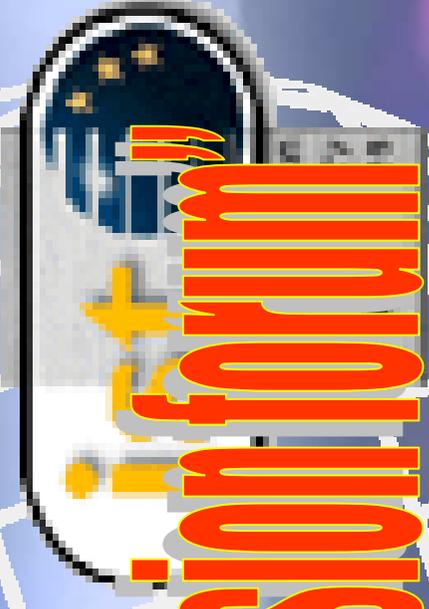

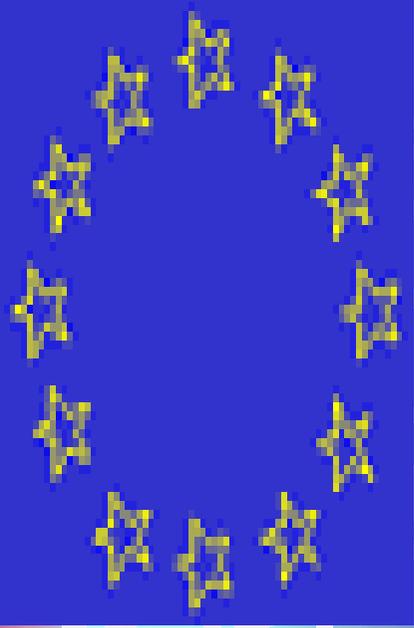

# IPv6 Council

- Initiated by Ministry of Public Management, Home Affairs, Posts and Telecommunications
- Chair: Jun Murai
- Not only router vendors and service providers, but home appliance developers etc. are involved
- TAO (Telecommunications Advancement Organization of Japan) conducts a nation-wide IPv6 experiment including home appliance application development, using budget of 8 billion Yen (= \$ 800k).

# Convergence Issues

The telecoms and data worlds have different roots:

Common applications !  
Common infrastructure

## Data Communications

- connectionless
- services are loosely-coupled to the network
- distributed control
- software is fault tolerant
- features selected during sessions
- little attention to QoS
- high latency

## Telecommunications

- connection-oriented
- services are tightly-coupled to the network
- centralised control
- hardware is fault tolerant
- features selected at call setup
- obsession with QoS
- low latency

# Identified Work

The telecoms and data worlds  
have different roots:
