

## **UNITED NATIONS OF YOUTH FOUNDATION (NIGERIA)**

Following the invitation of 25/4/2003 to make contributions into the proposed working document the WSIS Pre-com 3, we hereby write to state as follows:

- That the cost of accessing and servicing information through the use of ICT to Africans and the generality of the third world should be made affordable and made to be within the reach of their average people.
- That globalisation which is the major dividend being promised by the revolution in information technology, should be made to have human face. That is, it should not be made to ostracise or marginalise some section of the world in order to benefit some few by the virtue of their status, position and economic power.
