

## **Groupe des Ecoles des Télécommunications**

The Institut National des Télécommunications, which belongs to the Groupe des Ecoles des Télécommunications, has developed a pretty unique concept: it provides two complementary educations on the same campus. On one side, TELECOM INT delivers an engineering diploma, and on the other side a management diploma is obtained via INT Management. Worldwide, several identical examples can be identified : Sup Com in Tunis (Tunisia), ESMPT in Dakar (Senegal), MMU in Cyberjava (Malaysia) , ICU in Daejeon (South Korea)... and INT in France

Text proposal for the WSIS:

To implement a non institutional co-ordination between the different high level education establishments to:

- Create a worldwide homogeneous and coherent network of higher education actors
- Enhance best-practices exchanges and transfers
- Promote those models in other countries to increase the level of higher education in the field of ICT
- Catalyse innovation via research activities.
