E-Participation & the UN E-Government Survey

- The United Nations e-Government Survey uses a three-level model of e-participation that moves from more “passive” to “active” engagement with people:

A.1. E-Participation Framework

- E-information: Enabling participation by providing citizens with public information and access to information without or upon demand
- E-consultation: Engaging citizens in contributions to and deliberation on public policies and services
- E-decision-making: Empowering citizens through co-design of policy options and co-production of service components and delivery modalities.

Why not utilize the ICT capacity of citizens for more effective participation in public life - particularly in policy making?

Development Account Project on E-Participation

To strengthen the capacity of developing countries to apply Information Communication Technologies (ICTs) for engaging citizens through e-participation for development results.

Development Account Project on E-Participation

As part of this project, a national workshop in I.R. of Iran was undertaken in March 2015.

METEP Introduced in Tehran

DPADM's METEP tool was introduced in the Islamic Republic of Iran, during the e-Government Development Workshop. Participants from various government offices, including the Ministry of Infrastructure, participated in the "Measurement and Evaluation" workshop.

METEP

Measurement and Evaluation Tool for Engagement and e-Participation

The United Nations Department of Economic and Social Affairs (UNDESA) developed this self-assessment questionnaire in response to an emerging need for stronger and deeper participation in citizen engagement by all stakeholders, as identified in the Rio+20 Summit Report, Realizing the Future We Want for All, and the work of the UN Task Team on the Post-2015 Development Agenda.

Engaging citizens is beneficial to governments throughout the public process: i) at the early stages to enhance public problem definition and to identify acceptable policy options; ii) through the implementation stages by facilitating dialog to support policy inclusiveness and iii) to receive feedback while monitoring and evaluating public policy programmes and their outcomes, which is key to continuous improvements in the delivery of public goods and services.

Instructions

The METEP Questionnaire consists three parts:

Part A - fact based questions - takes stock, based on a factual observation.

Part B - agency specific questions - evaluates the organizational experience of individual government agencies across the board.

Part C - experience based assessment - assesses, based on direct experience.

Further Thinking

- **Considering past 10 years of WSIS experience, it is easier to develop indicators and gather data concerning ICT supply and access**
- **It is more challenging to gather data on ICT use and impact**
- **In the case of ICT indicators, particular attention should be paid to the pace of change and new trends such as big data, data analytics.**

Further Thinking

- **Broadband networks and services are now the benchmark against which progress towards an Information Society is measured**
- **Availability of big data and the degree of restriction to it (censorship) is a new trend towards measuring the Information Society**
- **DPADM's new e-Government Survey will be published in 2016 and will serve as a very useful tool in measuring Information Society**
