

## Young man climbs on top of tree to improve internet signal and attend classes in Pará

This was the way that the young Artur Mesquita, 15 years old, found to follow the classes, which started to be online, due to the pandemic of Covid-19.

Lack of reliable ICT infrastructure is one of the reasons ½ of population is unconnected

Where is the Infrastructure?

# ITU Broadband Maps

## Operators:

Region	Terrestrial
Africa	93
Arab States	40
Asia & Pacific	94
CIS	26
Europe	141
The Americas	108
<b>Total</b>	<b>512</b>

# Data Validation Framework & Data source

# Broadband Transmission Capacity Indicators

**Indicator 1: Transmission network length (Route kilometres)**

**Indicator 2: Node locations**

**Indicator 3: Equipment type of terrestrial transmission network**

**Indicator 4: Network capacity (bit rate)**

**Indicator 5: Number of optical fibres within the cable**

**Indicator 6: Operational status of the transmission network**

**Indicator 7: population within reach of transmission networks**

**Menu**

**Base Layer**

1.0 km

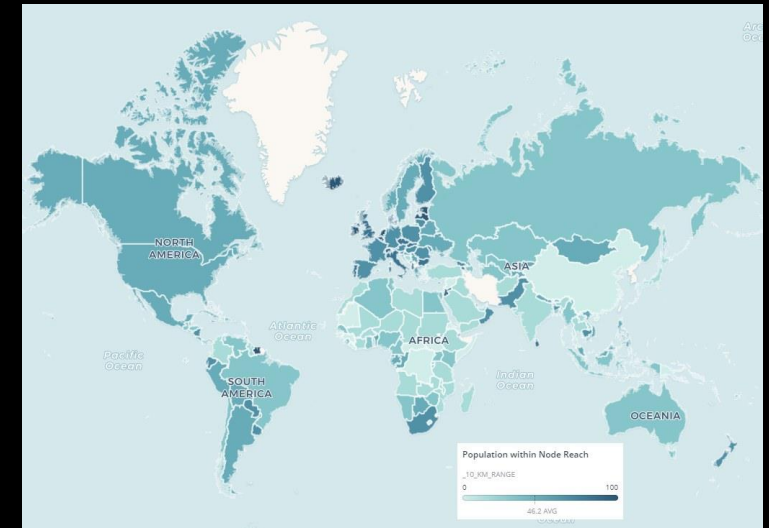

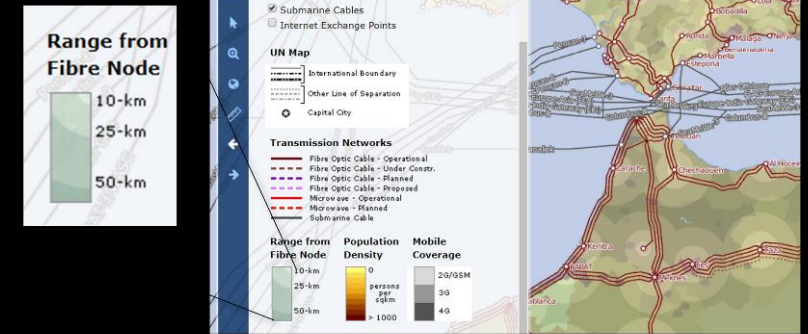

# Data Analysis

Distance to Internet high-speed pathways (Access Points)

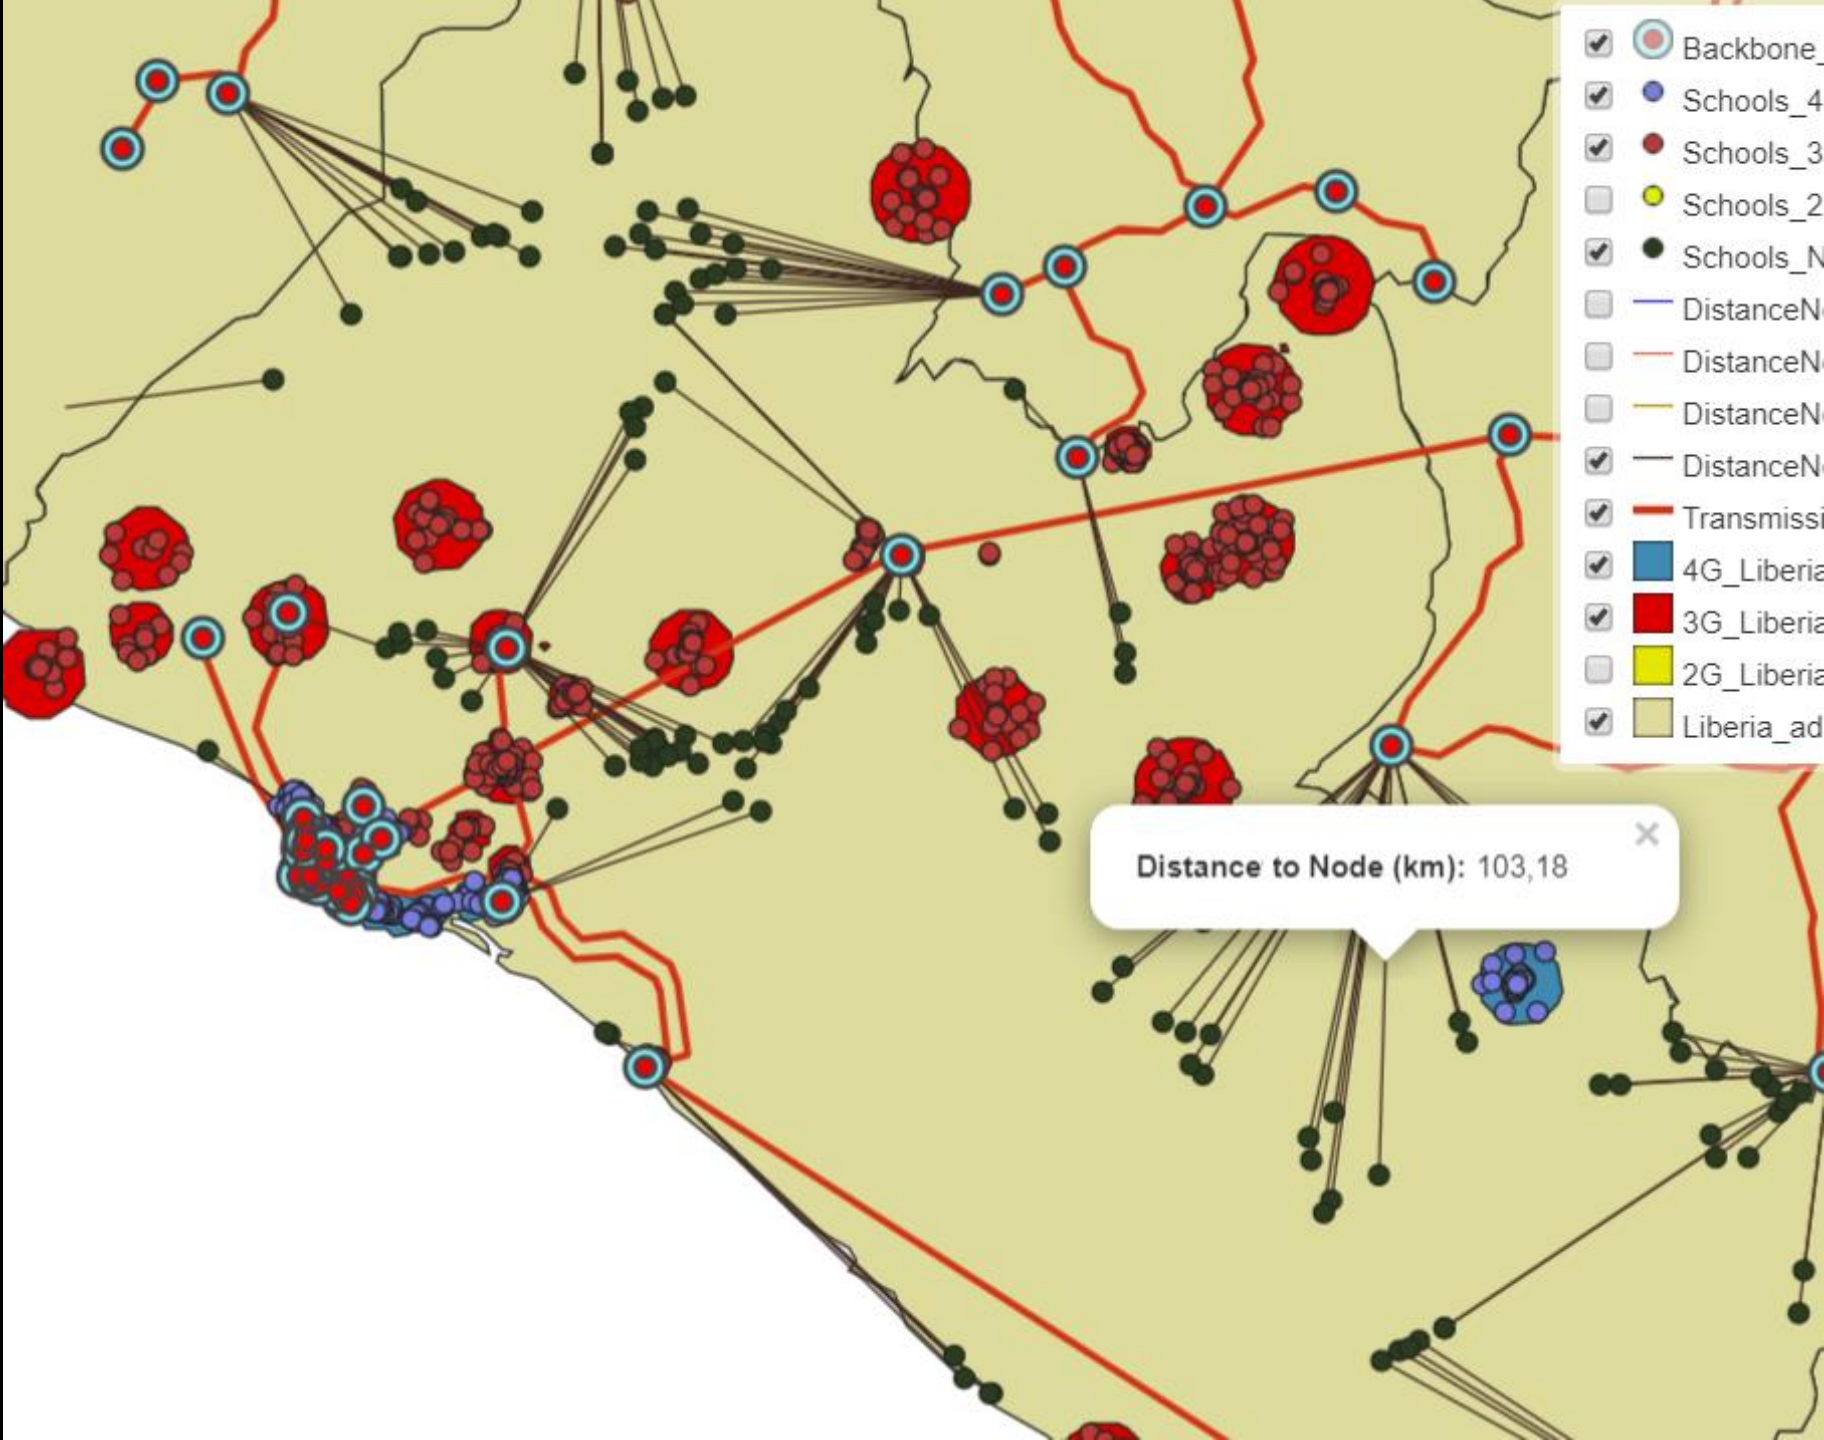

- **Distance to Internet high-speed pathways (Access Points)**

- Broadband indicators can help with the questions raised, for instance the “Broadband indicator population within 10 Km reach”. This indicator informs about the percentage of people that are within physical reach of an access point (nodes)
- The population living within reach of transmission networks is calculated from network nodes because nodes are access points to the network. This is a useful indicator of the catchment area of a core transmission network or networks, and how many people it potentially serves.

# GIGA – Connect every school

- Map
- Connect
- Finance
- Empower

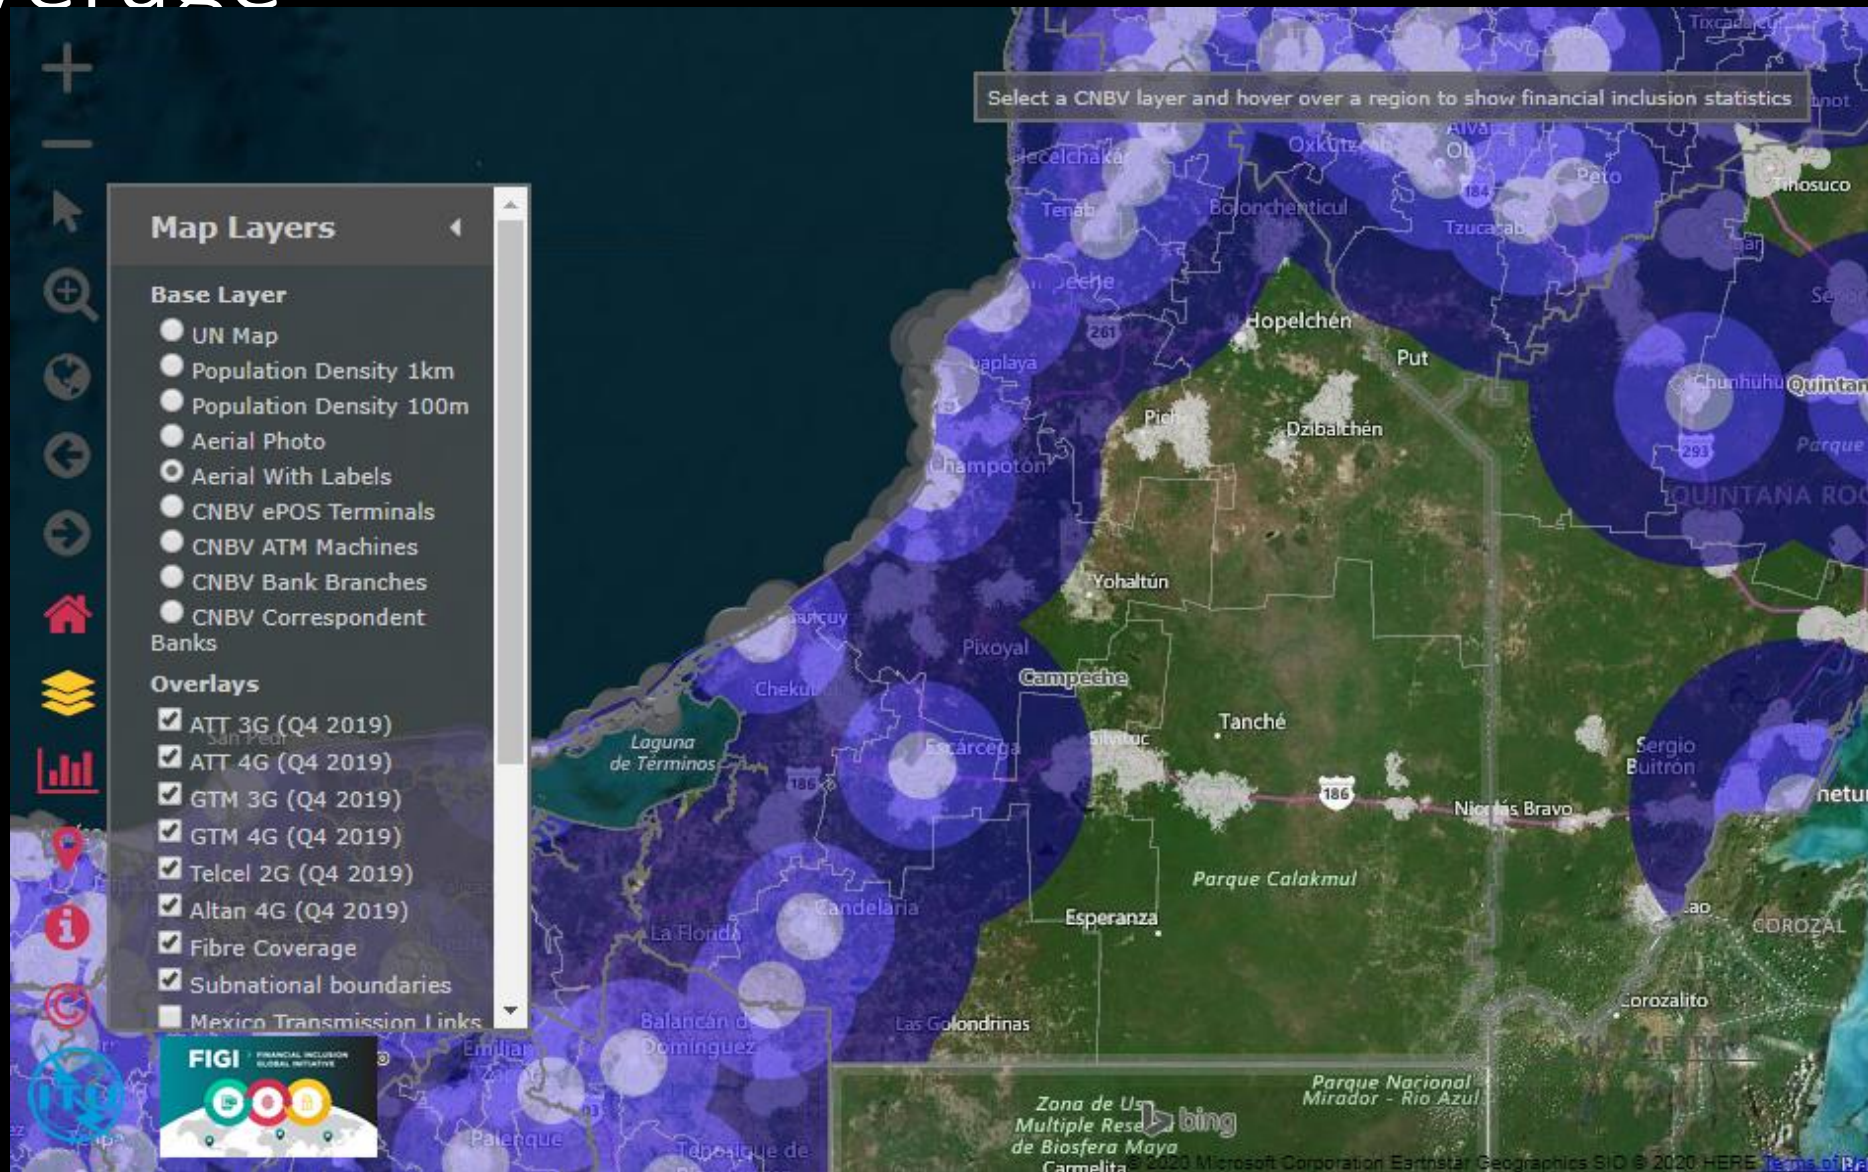

# Connecting schools - Increased Data Value (Country case study)

- **Case: school connectivity bid (UNDP)**
  - GIS backbone data as a source of reference to check the level of connectivity of existing and potential candidate sites for free Public Wi-Fi.
  - Ensure that free Wi-Fi sites are in areas that are underserved by service providers.
  - The backbone fiber data was used to determine if there are other significant sources of connectivity options in the sites identified.
- **Lessons**
  - Making existing data available
  - Focused actions -> increased data quality / update
  - Supplement with additional sources to build a robust view of existing infrastructure
  - Consider local terrestrial middle mile providers

# FIGI -Comparison of fibre and mobile coverage

# Financial Connectivity Index

- A way to visualise further possible barriers to entry for uptake of FinServ
- Weighted Sum method combines multiple layers:
  - Crime rate per municipality
  - ePOS Terminals
  - ATM Machines
  - Bank Branches
  - Correspondent Banks
- Weighting (adjustable) set to 20%
- To be made available as Web Map Services (WMS) layer, for inclusion into Desktop GIS

# Next developments

- Quick Network estimation – ITU Regional Initiative model
- Connectivity estimation – Quality of Service
- New graphical interface
- Support to global, regional and national Infrastructure development initiatives
- Data collection
  - Terrestrial Transmission -Collaboration with National GIS offices
  - New Layers – Satellite Coverage (BR-GIMS)
  - Improving data collection in Central America: Guatemala, Honduras, and El Salvador
- ITU Assistances
  - Mapping systems
  - Data Structure harmonization
