

Sun Bae Lim

He received his BE, MS, and Ph.D. from Korea University, KAIST, and Korea University in 1978, 1986, and 1993, respectively. He has been with ETRI since 1984, where he involved in the SSM16/SSM32 computer system development project from 1984 to 1989, the CDMA digital communication system development project from 1990 to 1996, the CDMA3X system development from 1997 to 1999 and WCDMA system development for eight months in 2000. Now, he is working for the high-speed mobile internet system development project as a director, which is one of ETRI's 4th Generation Mobile system R&D projects. His research interests include system architecture, protocol engineering, IP based network and vertical handoff mechanisms between heterogeneous communication systems.
