

ABSTRACT

The presentation start with a short description of the bodies involved, the legal framework and the aim of the spectrum management in Italy, taking into account also the operational activities aimed to grant an efficient utilisation of spectrum and the territorial structure involved in the monitoring.

Then is afforded the theme of growing interest for radio spectrum, the reasons of this interest and the consequence on the spectrum mangers. In the framework of the pressure on the managers particular attention is given to the claim for innovative policies in spectrum management having in mind the potential impact on the efficient use of frequencies, on the need to maintain interoperability and a set of commonality at international level.

Moreover is afforded the theme of the introduction of flexibility in the frequencies allocation and finally is given a look to the future considering the technological innovations now predictable and having the potential to change the spectrum management policies.
