## **Supplement 37 to ITU-T Q-series Recommendations**

### **DSS1 and DSS2 messages and information element identifiers**

#### **Summary**

This supplement to the Q series of ITU-T Recommendations lists DSS1 and DSS2 message and information element identifiers. It also lists X.36 and X.76 message and information element identifiers since they use the same protocol discriminator as DSS1. Finally, this supplement records DSS2 message, information elements identifiers and information element code points reserved to the MFA Forum.

#### **Source**

Supplement 37 to ITU-T Q-series Recommendations was agreed on 28 July 2006 by ITU-T Study Group 11 (2005-2008).

## FOREWORD

The International Telecommunication Union (ITU) is the United Nations specialized agency in the field of telecommunications. The ITU Telecommunication Standardization Sector (ITU-T) is a permanent organ of ITU. ITU-T is responsible for studying technical, operating and tariff questions and issuing Recommendations on them with a view to standardizing telecommunications on a worldwide basis.

The World Telecommunication Standardization Assembly (WTSA), which meets every four years, establishes the topics for study by the ITU-T study groups which, in turn, produce Recommendations on these topics.

The approval of ITU-T Recommendations is covered by the procedure laid down in WTSA Resolution 1.

In some areas of information technology which fall within ITU-T's purview, the necessary standards are prepared on a collaborative basis with ISO and IEC.

## NOTE

In this publication, the expression "Administration" is used for conciseness to indicate both a telecommunication administration and a recognized operating agency.

Compliance with this publication is voluntary. However, the publication may contain certain mandatory provisions (to ensure e.g. interoperability or applicability) and compliance with the publication is achieved when all of these mandatory provisions are met. The words "shall" or some other obligatory language such as "must" and the negative equivalents are used to express requirements. The use of such words does not suggest that compliance with the publication is required of any party.

## INTELLECTUAL PROPERTY RIGHTS

ITU draws attention to the possibility that the practice or implementation of this publication may involve the use of a claimed Intellectual Property Right. ITU takes no position concerning the evidence, validity or applicability of claimed Intellectual Property Rights, whether asserted by ITU members or others outside of the publication development process.

As of the date of approval of this publication, ITU had not received notice of intellectual property, protected by patents, which may be required to implement this publication. However, implementers are cautioned that this may not represent the latest information and are therefore strongly urged to consult the TSB patent database at <http://www.itu.int/ITU-T/ipr/>.

## Supplement 37 to ITU-T Q-series Recommendations

### DSS1 and DSS2 messages and information element identifiers

#### 1 Introduction

DSS1 and DSS2 message and information element identifiers are defined in several Recommendations of the Q-series [1] to [24]. Frame Relay DTE-DCE and NNI signalling defined in ITU-T Recs X.36 and X.76 [25] and [26] use the same protocol discriminator as DSS1 and therefore the same identifier spaces. In addition, several message and information element identifiers have been allocated to the MFA Forum from DSS2 identifier spaces and some information element code points have been reserved to the MFA Forum.

The purpose of this supplement is to record in one place DSS1 and DSS2 message and information element identifiers defined in the following Recommendations:

- DSS1 Recommendations: ITU-T Recs Q.931, Q.932 and Q.952 [1], [2] and [4].
- DSS2 Recommendations: ITU-T Recs Q.2931 and other Recommendations [5] to [24].
- Frame relay Recommendations: ITU-T Recs Q.933, X.36 and X.76 [3], [25] and [26].

In addition, this supplement records DSS2 message and information element identifiers and DSS2 information element code points reserved to the MFA Forum.

This supplement is structured as follows: clause 1.1 lists ITU-T Recommendations referred to in this supplement. Clause 1.2 explains the convention used to create the two tables of DSS1 and DSS2 messages and information elements. Clauses 2 and 3 list DSS1 and DSS2 messages and information elements respectively. Finally, clause 4 records DSS2 information element code points reserved to the MFA Forum.

- [23] ITU-T Recommendation Q.2982 (1999), *Broadband integrated services digital network (B-ISDN) – Digital subscriber signalling system No. 2 (DSS2) – Q.2931-based separated call control protocol*.
- [24] ITU-T Recommendation Q.2983 (1999), *Broadband integrated services digital network (B-ISDN) – Digital subscriber signalling No. 2 (DSS2) – Bearer control protocol*.
- [25] ITU-T Recommendation X.36 (2003), *Interface between data terminal equipment (DTE) and data circuit-terminating equipment (DCE) for public data networks providing frame relay data transmission service by dedicated circuit*.
- [26] ITU-T Recommendation X.76 (2003), *Network-to-network interface between public networks providing PVC and/or SVC frame relay data transmission service*.

## 1.2 Conventions

- For DSS1 and DSS2 messages and information elements, Tables of three columns are provided with the following information:
  - Message and information element names;
  - Message and information element numerical identifiers in binary;
  - The reference(s) where message or information elements are defined or used.
- Messages and information elements are listed in numerical ascending order of their identifiers.
- When a message or information element identifier is not assigned, the last two columns of the Tables are left blank. When four or more consecutive identifiers are unassigned, only the first and last values of the range are listed in the first column and it is explicitly stated that the range is unassigned.

## 2 DSS1 and DSS2 message identifiers

| Message identifier                 | Message name        | Reference                 |
|------------------------------------|---------------------|---------------------------|

### 4.1 Broadband bearer capability information element

*BTC field (octet 5a)*

Bits

7 6 5 4 3 2 1

0 0 0 1 1 1 0 GFR 1

0 0 0 1 1 1 1 GFR 2

### 4.2 ATM traffic descriptor information element

*Subfield identifiers*

Bits

8 7 6 5 4 3 2 1

1 0 1 1 1 0 0 0 Forward MFS

1 0 1 1 1 0 0 1 Backward MFS

1 0 1 1 1 0 1 0 Forward BCT

1 0 1 1 1 0 1 1 Backward BCT

1 0 0 0 1 1 1 0 Best Effort Indicator

1 1 0 0 0 0 1 0 High Rate Forward Peak Cell Rate identifier (CLP = 0)

1 1 0 0 0 0 1 1 High Rate Backward Peak Cell Rate identifier (CLP = 0)

1 1 0 0 0 1 0 0 High Rate Forward Peak Cell Rate identifier (CLP = 0 + 1)

1 1 0 0 0 1 0 1 High Rate Backward Peak Cell Rate identifier (CLP = 0 + 1)

1 1 0 0 1 0 0 0 High Rate Forward Sustainable Cell Rate identifier (CLP = 0)

1 1 0 0 1 0 0 1 High Rate Backward Sustainable Cell Rate identifier (CLP = 0)

1 1 0 1 0 0 0 0 High Rate Forward Sustainable Cell Rate identifier (CLP = 0 + 1)

1 1 0 1 0 0 0 1 High Rate Backward Sustainable Cell Rate identifier (CLP = 0 + 1)

1 1 1 0 0 0 0 0 High Rate Forward Maximum Burst Size identifier (CLP = 0)

1 1 1 0 0 0 0 1 High Rate Backward Maximum Burst Size identifier (CLP = 0)

1 1 1 1 0 0 0 0 High Rate Forward Maximum Burst Size identifier (CLP = 0 + 1)

1 1 1 1 0 0 0 1 High Rate Backward Maximum Burst Size identifier (CLP = 0 + 1)

1 1 0 1 0 0 1 0 High Rate Forward Minimum Cell Rate identifier (CLP = 0 + 1)

1 1 0 1 0 0 1 1 High Rate Backward Minimum Cell Rate identifier (CLP = 0 + 1)

1 1 1 1 1 0 1 0 High Rate Forward Burst Cell Tolerance identifier

1 1 1 1 1 0 1 1 High Rate Backward Burst Cell Tolerance identifier

### 4.3 Broadband repeat indicator information element

*Broadband repeat indicator field (octet 5)*

Bits

4 3 2 1

1 0 1 0 Last in, first out stack

#### 4.4 ABR setup parameters information element

##### *Subfield identifiers*

Bits

8 7 6 5 4 3 2 1

|                 |   |
|-----------------|---|
| 1 1 1 0 0 0 1 0 | High Rate Forward ABR Initial Cell Rate identifier (CLP = 0 + 1)          |
| 1 1 1 0 0 0 1 1 | High Rate Backward ABR Initial Cell Rate identifier (CLP = 0 + 1)         |
| 1 1 1 0 0 1 0 0 | High Rate Forward ABR Transient Buffer Exposure identifier (CLP = 0 + 1)  |
| 1 1 1 0 0 1 0 1 | High Rate Backward ABR Transient Buffer Exposure identifier (CLP = 0 + 1) |

## SERIES OF ITU-T RECOMMENDATIONS

|                 |   |
|-----------------|---|
| Series A        | Organization of the work of ITU-T   |
| Series D        | General tariff principles   |
| Series E        | Overall network operation, telephone service, service operation and human factors           |
| Series F        | Non-telephone telecommunication services  |
| Series G        | Transmission systems and media, digital systems and networks                                |
| Series H        | Audiovisual and multimedia systems  |
| Series I        | Integrated services digital network   |
| Series J        | Cable networks and transmission of television, sound programme and other multimedia signals |
| Series K        | Protection against interference   |
| Series L        | Construction, installation and protection of cables and other elements of outside plant     |
| Series M        | Telecommunication management, including TMN and network maintenance                         |
| Series N        | Maintenance: international sound programme and television transmission circuits             |
| Series O        | Specifications of measuring equipment   |
| Series P        | Telephone transmission quality, telephone installations, local line networks                |
| <b>Series Q</b> | <b>Switching and signalling</b>   |
| Series R        | Telegraph transmission  |
| Series S        | Telegraph services terminal equipment   |
| Series T        | Terminals for telematic services  |
| Series U        | Telegraph switching   |
| Series V        | Data communication over the telephone network   |
| Series X        | Data networks, open system communications and security                                      |
| Series Y        | Global information infrastructure, Internet protocol aspects and next-generation networks   |
| Series Z        | Languages and general software aspects for telecommunication systems                        |
